Welcome

Thank you for purchasing our 10.2-inch combo DVR!
This user’s manual is designed to be a reference tool for the installation and operation of your system.
Here you can find information about this series 10.2-inch combo DVR features and functions, as well as a detailed menu tree.
Before installation and operation please read the following safeguards and warnings carefully!
Important Safeguards and Warnings

1. Electrical safety
All installation and operation here should conform to your local electrical safety codes. We assume no liability or responsibility for all the fires or electrical shock caused by improper handling or installation.

2. Transportation security
Heavy stress, violent vibration or water splash are not allowed during transportation, storage and installation.

3. Installation
Keep upwards. Handle with care.
Do not apply power to the 10.2-inch combo DVR before completing installation.
Do not place objects on the 10.2-inch combo DVR

4. Qualified engineers needed
All the examination and repair work should be done by the qualified service engineers. We are not liable for any problems caused by unauthorized modifications or attempted repair.

5. Environment
This series product working temperature ranges from -5°C to 55°C.
The 10.2-inch combo DVR should be installed in a cool, dry place away from direct sunlight, inflammable, explosive substances and etc.
Please unplug the power cable in case there is strong wind or lightning.

6. Accessories
Be sure to use all the accessories recommended by manufacturer.
Before installation, please open the package and check all the components are included.
Contact your local retailer ASAP if something is broken in your package.

7. About the LCD
During the installation, do not push or squeeze the LCD or its rim; it may result in LCD damage.
During the operation or storage, please avoid the hard object to scuff the screen.
Please keep the LCD clean. Use the soft cloth to clean regularly. Do not use gasoline, alcohol or other chemical reagent to clean the screen.
Do not allow the LCD video standstill for a long time; it may result in permanent damage.

7. Lithium battery
Improper battery use may result in fire, explosion, or personal injury!
When replace the battery, please make sure you are using the same model!
1 FEATURES AND SPECIFICATIONS

1.1 Overview

This series 10.2-inch combo DVR integrates the DVR (Digital Video Recorder) and displayer together. It is an excellent digital monitor product of decent appearance, strong function and reliable performance.

This series 10.2-inch combo DVR integrates the high quality LCD of vivid image and long-duration. Special and popular 10-inch width screen is suitable for remote video monitor and local display. It is a product of dual functions, of modern and character tastes.

It adopts embedded Linux OS to maintain stable operation. Popular H.264 compression algorithm and G.711 audio compression technology realize high quality, low bit stream. Unique frame by frame play function is suitable for detailed analysis. It has various functions such as record, playback, monitor at the same time and can guarantee audio and video synchronization. This series product has advanced technology and strong network data transmission function.

It can work in the local end, and at the same time, when connecting it to the professional surveillance software (PSS), it can connect to security network to realize strong network and remote monitor function.

This series product can be widely used in various areas such as super market, chain store, home use client, transportation, intelligent residential district and etc. It is an ideal option for the future home user security product.

1.2 Features

This series product has the following features:

● Real-time monitor
  The LCD displays the real-time monitor video. Support BNC video input and output.

● Storage function
  Special data format to guarantee data security and can avoid vicious data modification.

● Compression format
  Support multiple-channel audio and video. An independent hardware decodes the audio and video signal from each channel to maintain video and audio synchronization.

● Backup function
  Support backup operation via USB port (such as flash disk, portable HDD, burner)
  Client-end user can download the file to local HDD to backup via network.

● Record playback function
  Support each channel real-time record independently, and at the same time it can support search, forward play, network monitor, record search, download and etc.
Support various playback modes: slow play, fast play, backward play and frame by frame play. Support time title overlay so that you can view event accurate occurred time. Support specified zone enlargement.

- **Network operation**
  Support network remote real-time monitor, remote record search and remote PTZ control.

- **Alarm activation function**
  4-channel alarm input and 1-channel alarm outputs to realize alarm activation and on-site light control. The alarm input port and output has the protection circuit to guarantee device safety.

- **Communication port**
  RS485 port can realize alarm input and PTZ control. RS232 port can connect to keyboard to realize central control, and can also connect to PC COM to upgrade system and realize maintenance, and matrix control. Standard Ethernet port can realize network access function.

- **PTZ control**
  Support PTZ decoder via RS485. Support various decode protocols to allow the PTZ to control the speed dome.

- **Intelligent operation**
  Mouse operation function
  In the menu, support copy and paste setup function

- **UPnP**
  It is to establish the mapping relationship between the LAN and the WAN via the UPnP protocol.

- **LCD Control Function**
  Press the power button in the front panel for a long time to boot up or shut down the device. Press the power button in the front panel for a short time to open/close the LCD. Support LCD standby setup function. Mouse and remote control can awake the LCD.

- **Touch panel**
  It supports touch panel function.
  *Slight function differences may be found due to different series.*

</table>
| Hard Disk Occupation | Audio: PCM 28.8MByte/h  
                         Video: 56-900MByte/h |
| Record and playback | Manual recording, motion detection recording, schedule recording and alarm recording.  
                      Priority: Manual recording > alarm recording > motion detection recording > schedule recording. |
| Recording Length | 1 to 120 minutes single record duration (Default setup is 60 minutes) |
| Playback Repeat Way | When hard disk is full, system can overwrite previous video file. |
| Record Search | Various search engines such as time, type and channel. |
| Playback Mode | Various fast play, slow play speeds, manual frame by frame playback and reverse play mode. |
| Various File Switch Ways | Can switch to previous or next file or any file in current play list.  
                            Can switch to file on other channel of the same time. (If there is a file)  
                            Support file continuous play, when file is end system auto plays the next file in the current channel |
| Multi-channel Playback | Support full-channel.  
                         The first channel supports D1 25f/s. |
| Window Zoom | Switch between self-adaptive screen/full screen when playback |
| Partial Enlargement | When in one-window full-screen playback mode, you can select any zone to activate partial enlargement function. |
| Backup function | General HDD backup  
                   Support peripheral USB backup device. (Flash disk, portable disk and etc.)  
                   Support peripheral USB burner. (Expandable.)  
                   Support network download and backup |
| Network Function | View monitor channel remotely.  
                   Device configuration through client-end and web browser  
                   Upgrade via client–end or browser to realize remote maintenance.  
                   View alarm information such as external alarm, motion detection and video loss via client.  
                   Support network PTZ lens control  
                   File download backup and playback  
                   Multiple devices share information via corresponding software.  
                   Network alarm input and output  
                   Bidirectional audio. |
| Motion Detection and Alarm | Zone setup: support 396(PAL 22×18) /330(NTSC 22×15) detection zones.  
                            Various sensitivity levels.  
                            Alarm can activate record or external alarm or screen message prompt.  
                            Video Loss: Alarm can activate external alarm or screen message prompt.  
                            External Alarm: Support record activation function or activate external alarm or screen message in specified period.  
                            Manual Alarm Control: Enable or disable alarm input channel  
                                                  Support analog alarm signal to specific alarm output channel. |

### 2.5 Mouse Control

**Left click mouse**

- System pops up password input dialogue box if you have not logged in.
- In real-time monitor mode, you can go to the main menu.
- When you have selected one menu item, left click mouse to view menu content.
- Implement the control operation.
- Modify checkbox or motion detection status.
- Click combo box to pop up drop down list
In input box, you can select input methods. Left click the corresponding button on the panel you can input numeral/English character (small/capitalized). Here ← stands for backspace button. _ stands for space button.

In English input mode: _ stands for input a backspace icon and ← stands for deleting the previous character.

In numeral input mode: _ stands for clear and ← stands for deleting the previous numeral.

When input special sign, you can click corresponding numeral in the front panel to input. For example, click numeral 1 you can input “/”, or you can click the numeral in the on-screen keyboard directly.

Double left click mouse Implement special control operation such as double click one item in the file list to playback the video.

In multiple-window mode, double left click one channel to view in full-window. Double left click current video again to go back to previous multiple-window mode.

Right click mouse In real-time monitor mode, pops up shortcut menu: one-window, four-window, eight-window and nine-window, Pan/Tilt/Zoom, volume control, color setting, search, record, alarm output, main menu.

Among which, Pan/Tilt/Zoom and color setting applies for current selected channel.

If you are in multiple-window mode, system automatically switches to the corresponding channel.

Press middle button In numeral input box: Increase or decrease numeral value.

Switch the items in the check box.

Page up or page down

Move mouse Select current control or move control

Drag mouse Select motion detection zone

Select privacy mask zone.
3 Installation and Connections

Note: All the installation and operations here should conform to your local electric safety rules.

3.1 Check Unpacked Device

When you receive the 10.2-inch combo DVR from the forwarding agent, please check whether there is any visible damage. The protective materials used for the package of the 10.2-inch combo DVR can protect most accidental clashes during transportation. Then you can open the box to check the accessories.

Please check the items in accordance with the list on the warranty card (Remote control is optional). Finally you can remove the protective film of the 10.2-inch combo DVR.

Note
Remote control is not a standard accessory and it is not included in the accessory bag.

3.2 About Front Panel and Real Panel

The model in the front panel is very important; please check according to your purchase order. The label in the rear panel is very important too. Usually we need you to represent the serial number when we provide the service after sales.

3.3 Device Installation

The series product supports two installation modes: desktop/ wall-mount. Please refer to the following figure. See Figure 3-1.

![Wall mount Installation holes](image)

Figure 3-1

3.4 Data Cable Connection

You can refer to the following figure for cable connection. See Figure 3-2.
Please use the screwdriver to secure the data cable and the 10.2-inch combo DVR cable socket. Please make sure it is firm otherwise it may result in network problem and etc. Then you can use the Ping command to test the network cable connection status. You need to check the cable connection if the request time is out.

3.5 HDD Installation

This series 10.2-inch combo DVR has only one 2.5-inch SATA HDD. You can refer to the Appendix for recommended HDD brand. You can select the capacity as your requirement. Please follow the instructions below to install the HDD.

1. Turn the screw of the HDD cover and then remove the HDD cover
2. Line up the HDD to the HDD slot and then install
3.6 Connecting Power Supply

Please check input voltage and device power button match or not. We recommend you use UPS to guarantee steady operation, 10.2-inch combo DVR life span, and other peripheral equipments operation such as cameras.

3.7 Connecting Video Input and Output Devices

3.7.1 Connecting Video Input

The video input interface is BNC. The input video format includes: PAL/NTSC BNC (1.0V_{p-p}, 75Ω). See Figure 3-3.

The video signal should comply with your national standards. The input video signal shall have high SNR, low distortion; low interference, natural color and suitable lightness.

Guarantee the stability and reliability of the camera signal:

3. Fix the HDD
4. Install the HDD cover.

5. Secure the screw of the HDD cover.
Now the installation completed
The camera shall be installed in a cool, dry place away from direct sunlight, inflammable, explosive substances and etc. The camera and the 10.2-inch combo DVR should have the same grounding to ensure the normal operation of the camera.

**Guarantee stability and reliability of the transmission line**
Please use high quality, sound shielded BNC. Please select suitable BNC model according to the transmission distance.
If the distance is too long, you should use twisted pair cable, and you can add video compensation devices or use optical fiber to ensure video quality.
You should keep the video signal away from the strong electromagnetic interference, especially the high tension current.

**Keep connection lugs in well contact**
The signal line and shielded wire should be fixed firmly and in well connection. Avoid dry joint, lap welding and oxidation.

![Video Input](image)

**Figure 3-3**

### 3.7.2 Connecting Video Output
Video output includes BNC(PAL/NTSC) BNC (1.0VP- P, 75Ω) output.
System supports BNC and HDMI output at the same time. See Figure 3-4.
When you are using pc-type monitor to replace the monitor, please pay attention to the following points:
Using TV as video output device is not a reliable substitution method. You also need to reduce the working hour and control the interference from power supply and other devices. The low quality TV may result in device damage.
3.8 Connecting Audio Input & Output, Bidirectional Audio

3.8.1 Audio Input

These series products adopt BNC port. Due to high impedance of audio input, please use active sound pick-up. See Figure 3-5. Audio transmission is similar to video transmission. Try to avoid interference, dry joint, loose contact and it shall be away from high tension current.

3.8.2 Audio Output

The audio output signal parameter is usually over 200mv 1KΩ (BNC). It can directly connect to low impedance earphone, active sound box or amplifier-drive audio output device. If the sound box and the pick-up cannot be separated spatially, it is easy to arouse squeaking. In this case you can adopt the following measures:

- Use better sound pick-up with better directing property.
- Reduce the volume of the sound box.
- Using more sound-absorbing materials in decoration can reduce voice echo and improve acoustics environment.
- Adjust the layout to reduce happening of the squeaking.

Please refer to Figure 3-6.
3.9 Alarm Input and Output Connection

Please refer to the following sheet for alarm input and output connection. See Figure 3-7.

There are two alarm input types for you to select: normal open (NO) and normal close (NC).

1. Alarm input
   a. Please make sure alarm input mode is grounding alarm input.
   b. Grounding signal is needed for alarm input.
   c. When you are connecting two 10.2-inch combo DVRs or you are connecting one 10.2-inch combo DVR and one other device, please use a relay to separate them.

2. Alarm output
The alarm output port should not be connected to high power load directly (It shall be less than 1A) to avoid high current which may result in relay damage. Please use the co contactor to realize the connection between the alarm output port and the load.

3. How to connect PTZ decoder
   a. Ensure the decoder has the same grounding with 10.2-inch combo DVR, otherwise you may not control the PTZ. Shielded twisted wire is recommended and the shielded layer is used to connect to the grounding.
   b. Avoid high voltage. Ensure proper wiring and some thunder protection measures.
   c. For too long signal wires, 120Ω should be parallel connected between A, B lines on the far end to reduce reflection and guarantee the signal quality.
   d. “485 A, B” of 10.2-inch combo DVR cannot parallel connect with “485 port” of other device.
   e. The voltage between of A,B lines of the decoder should be less than 5v.

4. Please make sure the front-end device has soundly earthed.
   Improper grounding may result in chip damage.

3.9.1 Alarm Input and Output Details
You can refer to the following sheet and Figure 3-8 for alarm input and output information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Grounding Alarm</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Ground line</td>
</tr>
<tr>
<td>1, 2, 3, 4.</td>

<td>RS485 communication port. They are used to control devices such as PTZ. Please parallel connect 120Ω between A/B cables if there are too many PTZ decoders.</td>
</tr>
</tbody>
</table>

3.9.2 Alarm Input Port
Please refer to the following sheet for more information.

- 4-channel alarm input. Normal open or Normal close type.
- Please parallel connect COM end and GND end of the alarm detector (Provide external power to the alarm detector).
- Please parallel connect the Ground of the 10.2-inch combo DVR and the ground of the alarm detector.
• Please connect the NC port of the alarm sensor to the 10.2-inch combo DVR alarm input(ALARM)
• Use the same ground with that of 10.2-inch combo DVR if you use external power to the alarm device.

![Alarm input public end should jump out with device power end Alarm device connection terminal](image)

**Figure 3-9**

### 3.9.3 Alarm Output Port

- 1-channel relay alarm output (NO contact). Provide external power to external alarm device.
- To avoid overloading, please read the following relay parameters sheet carefully.
- RS485 A/B cable is for the A/B cable of the PTZ decoder.

### 3.10 RS232

You can connect the 10.2-inch combo DVR with POS or Keyboard through RS232.
With POS system, the 10.2-inch combo DVR can communicate through RS232 and network. For the POS system, the 10.2-inch combo DVR can integrate the text content and even search the record through the info.

The series 10.2-inch combo DVR also supports NKB operation. You can operate the 10.2-inch combo DVR from the keyboard controls instead of using the control pad on the front panel of the unit. To connect a NKB keyboard to the 10.2-inch combo DVR:

1. Assemble the KBD keyboard according to the instructions in its accompanying installation manual.
2. Connect the KBD keyboard into one of the RS232 ports on the 10.2-inch combo DVR or through network.

3.11 RS485

When the 10.2-inch combo DVR receives a camera control command, it transmits that command up the coaxial cable to the PTZ device. RS485 is a single-direction protocol; the PTZ device can't return any data to the unit. To enable the operation, connect the PTZ device to the RS485 (A,B) input on the 10.2-inch combo DVR. See Figure 3-10.

Since RS485 is disabled by default for each camera, you must enable the PTZ settings first. This series 10.2-inch combo DVR supports multiple protocols such as Pelco-D, Pelco-P.

To connect PTZ devices to the DVR:
1. Connect RS485 A, B on the DVR rear panel.
2. Connect the other end of the cable to the proper pins in the connector on the camera.
3. Please follow the instructions to configure a camera to enable each PTZ device on the 10.2-inch combo DVR.

3.12 Other Interfaces

There are still other interfaces on the 10.2-inch combo DVR, such as USB ports. You can refer to Figure 3-11 for more information.
Figure 3-11
4 Overview of Navigation and Controls

Before operation, please make sure:
- You have properly installed HDD and all the cable connections.
- The provided input power and the device power are matched.
- The external power shall be DC 12V.
- Always use the stable current, if necessary UPS is a best alternative measure.

The following operation is based on the 8-channel series product.

4.1 Login, Logout & Main Menu

4.1.1 Login

Connect the power cable and the press the power button at the rear panel. You can see the power indication light is on and the DVR is booting up. The system goes to multiple-window display mode by default. You can see the corresponding channel record indication light is on if it is in the schedule record period.

After system booted up, system pops up the startup wizard.
Click the Cancel button; you can go to the system login interface.
Click the Next Step button; you can go to the startup wizard interface. Here you can set the system basic information. See Figure 4-1.

![Startup Wizard](image)

Figure 4-1

The system login interface is shown as in Figure 4-2.
System consists of four accounts:
- **Username**: admin. **Password**: admin. (administrator, local and network)
- **Username**: 888888. **Password**: 888888. (administrator, local only)
- **Username**: 666666. **Passwords**: 666666(Lower authority user who can only monitor, playback, backup and etc.)
- **Username**: default. **Password**: default(hidden user)

You can use USB mouse, front panel, remote control or keyboard to input. About input method:

Click ![ ] to switch between numeral, English character (small/capitalized) and denotation.

**Note:**
For security reason, please modify password after you first login.
Within 30 minutes, three times login failure will result in system alarm and five times login failure will result in account lock!

![Figure 4-2](image)

**4.1.2 Main Menu**

After you logged in, the system main menu is shown as below. See Figure 4-3. There are total six icons: search, information, setting, backup, advanced and shutdown. You can move the cursor to highlight the icon, and then double click mouse to enter the submenu.

![Figure 4-3](image)

**4.1.3 Shutdown**

*Important*

Please open the HDD cover and then cut off the power before you replace the HDD!

There are two ways for you to shutdown the device. One is from menu option (recommended):

In the main menu, click shutdown button, you can see an interface is shown as below. See Figure 4-4

![Figure 4-4](image)

There are several options for you. See Figure 4-5.
Please select the shutdown item to turn off the 10.2-inch combo DVR.

![Logout menu user]

- Restart application
- Shutdown
- Restart system
- Switch user

**Figure 4-5**

The other way is to press power button at the rear panel to turn off the device.

### 4.1.4 Auto Resume after Power Failure
The system can automatically backup video and resume previous working status after power failure.

### 4.1.5 Replace Button Battery
Please make sure to use the same battery model if possible.
Please contact your local retailer before you replace the battery.
We recommend replace battery regularly (such as one-year) to guarantee system time accuracy.
Before replacement, please save the system setup, otherwise, you may lose the data completely!

### 4.2 Manual Record

#### 4.2.1 Live Viewing
After you logged in, the system is in live viewing mode. You can see system date, time and channel name. If you want to change system date and time, you can refer to general settings (Main Menu->Setting->General). If you want to modify the channel name, please refer to the display settings (Main Menu->Setting->Display)

4.2.2 Manual record

Note: You need to have proper rights to implement the following operations. Please make sure the HDD has been properly installed.

4.2.2.1 Manual record menu

There are two ways for you to go to manual record menu.

- Right click mouse or in the main menu, Advanced->Manual Record.
- In live viewing mode, click record button in the front panel or REC button in the remote control.

Manual record menu is shown as in Figure 4-5.

4.2.2.2 Basic operation

There are three statuses: schedule/manual/stop. Please highlight icon “○” to select corresponding channel.

- Manual: The highest priority. After manual setup, all selected channels will begin ordinary recording.
- Schedule: Channel records as you have set in recording setup (Main Menu->Setting->Schedule)
- Stop: All channels stop recording.

Figure 4-8
4.2.2.3 Enable/disable record

Please check current channel status: “○” means it is not in recording status, “●” means it is in recording status.

You can use mouse or direction key to highlight channel number. See Figure 4-9.

![Figure 4-9](image)

4.2.2.4 Enable all channel recording

Highlight ○ below All, you can enable all channel recording.

- All channel schedule record

Please highlight “ALL” after “Schedule”. See Figure 4-10.

When system is in schedule recording, all channels will record as you have previously set (Main menu->Setting->Schedule).

The corresponding indication light in front panel will turn on.

![Figure 4-10](image)

- All channel manual record

Please highlight “ALL” after “Manual.” See Figure 4-11.

When system is in manual recording, all scheduled set up you have set in will be null ((Main menu->Setting->Schedule)).

You can see indication light in front panel turns on, system begins manual record now.

![Figure 4-11](image)

4.2.2.5 Stop all channel recording

Please highlight “ALL” after “Stop”. See Figure 4-12.
System stops all channel recording no matter what mode you have set in the menu (Main menu->Setting->Schedule)

![Image](image1.png)

**Figure 4-12**

### 4.3 Search & Playback

Click search button in the main menu, search interface is shown as below. See Figure 4-13. Usually there are three file types:
- R: Regular recording file.
- A: External alarm recording file.
- M: Motion detection recording file

![Image](image2.png)

**Figure 4-13**

Please refer to the following sheet for more information.

<table>
<thead>
<tr>
<th>SN</th>
<th>Name</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Display</td>
<td>Here is to display the searched picture or file.</td>
</tr>
</tbody>
</table>
### 2 Search type
- Here you can select to search the picture or the recorded file.
- When there is displayed picture on the left pane, you can set the corresponding setup.

### 3 Calendar
- The blue highlighted date means there is picture or file. Otherwise, there is no picture or file.
- In any play mode, click the date you want to see, you can see the corresponding record file trace in the time bar.

### 4 Playback mode and channel selection pane.
- **Playback mode**: 1/4/9. (It may vary due to different series.)
  - In 1-window playback mode: you can select 1-8 channels.
  - In 4-window playback mode: you can select 4 channels according to your requirement.
  - In 9-window playback mode: you can set 1-8 channels.
- The time bar will change once you modify the playback mode or the channel option.

### 5 File list switch button
- Double click it, you can view the picture/record file list of current day.
- The file list is to display the first channel of the record file.
- The system can display max 128 files in one time. Use the ▲/▼ or the mouse to view the file. Select one item, and then double click the mouse or click the ENTER button to playback.
- You can input the period in the following interface to begin accurate search.
- **File type**: R—regular record; A—external alarm record; M—Motion detect record.

### 6 Card number search
The card number search interface is shown as below.

### 7 Playback control pane.
- **Play/Pause**
  - There are three ways for you to begin playback.
    - The play button
    - Double click the valid period of the time bar.
    - Double click the item in the file list.
  - In slow play mode, click it to switch between play/pause.
- **Stop**
- **Backward play**
  - In normal play mode, left click the button, the file begins backward play. Click it again to pause current play.
  - In backward play mode, click ►/Ⅱ to restore normal play.
- **Slow play**
  - In playback mode, click it to play the next or the previous section. You can click continuously when you are watching the files from the same channel.
  - In normal play mode, when you pause current play, you can click ▼ and ► to begin frame by frame playback.
  - In frame by frame playback mode, click ►/Ⅱ to restore normal playback.
- **Fast forward**
  - In playback mode, click to realize various fast play modes such as fast play 1, fast play 2 and etc.

Note: The actual play speed has relationship with the software version.
The volume of the playback

Click the snapshot button in the full-screen mode, the system can snapshot 1 picture per second.

<table>

</tbody>
</table>

**Note:**

All the operations here (such as playback speed, channel, time and progress) have relationship with hardware version. Some series 10.2-inch combo DVR may not support some functions or playback speeds.

**4.4 Schedule**
After system booted up, it is in default 24-hour regular mode. You can set record type and time in schedule interface.

### 4.4.1 Schedule Menu

In the main menu, from setting to schedule, you can go to schedule menu. See Figure 4-14X.

- **Channel**: Please select the channel number first. You can select “all” if you want to set for the whole channels.
- **Week day**: There are eight options: ranges from Saturday to Sunday and all.
- **Pre-record**: System can pre-record the video before the event occurs into the file. The value ranges from 1 to 30 seconds depending on the bit stream.
- **Snapshot**: You can enable this function to snapshot image when alarm occurs. **(Note: This function is for 4-channel series only. The 8-channel series product does not support the schedule snapshot function.)**
- **Record types**: There are four types: regular, motion detection (MD), Alarm, MD & alarm.

Please highlight icon ☐ to select the corresponding function. After completing all the setups please click save button, system goes back to the previous menu.

At the bottom of the menu, there are color bars for your reference. Green color stands for regular recording, yellow color stands for motion detection and red color stands for alarm recording. The white means the MD and alarm record is valid. Once you have set to record when the MD and alarm occurs, system will not record neither motion detect occurs nor the alarm occurs.

![Figure 4-14](image)

#### 4.4.1.1 Quick Setup

This function allows you to copy one channel setup to another. After setting in channel 1, you can click paste button and turn to channel 2 and then click copy button. You can finish setting for one channel and then click save button or you can finish all setup and then click save button to memorize all the settings.

#### 4.4.2 Snapshot

4.4.2.1 Schedule Snapshot

**Note**: This function is for 4-channel series only.

In Encode interface, click snapshot button to input snapshot mode, size, quality and frequency.
In General interface please input upload interval.
In Schedule interface, please enable snapshot function.
Please refer to the following figure for detailed information. See Figure 4-15.

4.4.2.2 Activation Snapshot
Please follow the steps listed below to enable the activation snapshot function. After you enabled this function, system can snapshot when the corresponding alarm occurred.
- In Encode interface, click snapshot button to input snapshot mode, size, quality and frequency.
- In General interface please input upload interval.
- In Detect interface please enable snapshot function for specified channels. Or in alarm interface please enable snapshot function for specified channels.
Please refer to the following figure for detailed information. See Figure 4-16.
4.4.2.3 Priority
Please note the activation snapshot has the higher priority than schedule snapshot. If you have enabled these two types at the same time, system can activate the activation snapshot when alarm occurs, and otherwise system just operates the schedule snapshot.

4.4.3 Image FTP
In Network interface, you can set FTP server information. Please enable FTP function and then click save button. See Figure 4-17.
Please boot up corresponding FTP server.
Please enable schedule snapshot (Chapter 4.4.2.1) or activation snapshot (Chapter 4.4.2.2) first, now system can upload the image file to the FTP server.

4.5 Detect
4.5.1 Go to Detect Menu
In the main menu, from Setting to Detect, you can see motion detect interface. See Figure 4-16. There are three detection types: motion detection, video loss, camera masking.

4.5.2 Motion Detect
Detection menu is shown as below. See Figure 4-18.
- Event type: from the dropdown list you can select motion detection type.
Channel: select the channel to activate recording function once alarm occurred. Please make sure you have set MD record in encode interface(Main Menu->Setting->Schedule) and schedule record in manual record interface(Main Menu->Advanced->Manual Record)

Latch: when motion detection complete, system auto delays detecting for a specified time. The value ranges from 10-300(Unit: second)

Region: Click select button, the interface is shown as in Figure 4-19. Here you can set motion detection zone. There are 396(22*18 PAL)/330(22*15 NTSC) small zones. The green zone is current cursor position. Grey zone is the motion detection zone. Black zone is the disarmed zone. You can click Fn button to switch between the arm mode and disarm mode. In arm mode, you can click the direction buttons to move the green rectangle to set the motion detection zone. After you completed the setup, please click ENTER button to exit current setup. Do remember click save button to save current setup. If you click ESC button to exit the region setup interface system will not save your zone setup.

Sensitivity: System supports 6 levels. The sixth level has the highest sensitivity.

Show message: System can pop up a message to alarm you in the local host screen if you enabled this function.

Alarm upload: System can upload the alarm signal to the network (including alarm centre) if you enabled current function.

Send email: System can send out email to alert you when alarm occurs.

PTZ activation: Here you can set PTZ movement when alarm occurs. Such as go to preset, tour & pattern when there is an alarm. Click “select” button, you can see an interface is shown as in Figure 4-20. Please note motion detect can only activate the preset.

Period: Click set button, you can see an interface is shown as in Figure 4-21. Here you can set for business day and non-business day. In Figure 4-21, click set button, you can see an interface is shown as in Figure 4-22. Here you can set your own setup for business day and non-business day.

Anti-dither: Here you can set anti-dither time.

Alarm output: when alarm occurred, system can upload alarm to the network (Including the alarm centre.)

Tour: Here you can enable tour function when alarm occurs. It is a one-window tour. Please go to chapter 5.3.9 Display for tour interval setup.

Buzzer: Highlight icon to enable this function. The buzzer beeps when alarm occurs.

Please highlight icon 📦 to select the corresponding function. After all the setups please click save button, system goes back to the previous menu.

Note:
In motion detection mode, you can not use copy/paste to set channel setup since the video in each channel may not be the same.

In Figure 4-19, you can left click mouse and then drag it to set a region for motion detection. Click Fn to switch between arm/withdraw motion detection. After setting, click enter button to exit.
Figure 4-18

Figure 4-19

Figure 4-20
4.5.3 Video Loss
In Figure 4-18, select video loss from the type list. You can see the interface is shown as in Figure 4-23. This function allows you to be informed when video loss phenomenon occurred. You can enable alarm output channel and then enable show message function.

Tips:
You can enable preset/tour/pattern activation operation when video loss occurs. Please refer to chapter 4.5.2 motion detection for detailed information.

4.5.4 Camera Masking
When someone viciously masks the lens, or the output video is in one-color due to the environments light change, the system can alert you to guarantee video continuity. Camera masking interface is shown as in Figure 4-22.
Tips:
You can enable preset/tour/pattern activation operation when video loss occurs. Please refer to chapter 4.5.2 motion detection for detail information.

Note:
In Detect interface, copy/paste function is only valid for the same type, which means you can not copy a channel setup in video loss mode to camera masking mode.

![Image of alarm setup interface](image)

**Figure 4-24**

### 4.6 Alarm Setup and Alarm Activation

Before operation, please make sure you have properly connected alarm devices such as buzzer.

#### 4.6.1 Go to alarm setup interface

In the main menu, from Setting to Alarm, you can see alarm setup interface. See Figure 4-25.

#### 4.6.2 Alarm setup

Alarm interface is shown as below. See Figure 4-25.

- **Alarm in:** Here is for you to select channel number.
- **Event type:** There are two types. One is local input and the other is network input.
- **Type:** normal open or normal close.
- **PTZ activation:** Here you can set PTZ movement when alarm occurs. Such as go to preset, tour & pattern when there is an alarm. Click "select" button, you can see an interface is shown as in Figure 4-26.
- **Period:** Click set button, you can see an interface is shown as in Figure 4-27. Here you can set for business day and non-business day. In Figure 4-27, click set button, you can see an interface is shown as in Figure 4-28. Here you can set your own setup for business day and non-business day.
- **Anti-dither:** Here you can set anti-dither time.
- **Show message:** System can pop up a message to alarm you in the local host screen if you enabled this function.
- **Alarm upload:** System can upload the alarm signal to the network (including alarm centre) if you enabled current function.
- **Send email:** System can send out email to alert you when alarm occurs.
• Record channel: you can select proper channel to record alarm video (Multiple choices). At the same time you need to set alarm record in schedule interface (Main Menu->Setting->Schedule) and select schedule record in manual record interface (Main Menu->Advance->Manual Record).

• Latch: Here is for you to set proper delay duration. Value ranges from 10 to 300 seconds. System automatically delays specified seconds in turning off alarm and activated output after external alarm cancelled.

• Tour: Here you can enable tour function when an alarm occurs. It is a one-window tour: Please go to chapter 5.3.9 Display for tour interval setup.

• Buzzer: Highlight icon to enable this function. The buzzer beeps when an alarm occurs. For snapshot operation, please refer to chapter 4.4.2.

Please highlight icon to select the corresponding function. After setting all the setups please click save button, system goes back to the previous menu.

![Figure 4-25](image1)

![Figure 4-26](image2)
4.7 Backup

10.2-inch combo DVR supports USB device backup and network download. Here we introduce USB backup first. You can refer to Chapter 7 Web Operation for network download backup operation.

4.7.1 Detect Device
Click backup button, you can see an interface is shown as in Figure 4-29. Here is for you to view devices information such as total capacity and status.
You can view backup device name and its total space and free space. The device includes USB burner, flash disk, SD card and portable HDD.
4.7.1 Backup
Select backup device and then set channel, file start time and end time. Click add button, system begins search. All matched files are listed below. System automatically calculates the capacity needed and remained. See Figure 4-30. System only backup files with a √ before channel name. You can use Fn or cancel button to delete √ after file serial number. Click backup button, you can backup selected files. There is a process bar for you reference. When the system completes backup, you can see a dialogue box prompting successful backup.

![Figure 4-30](image)

Click backup button, system begins burning. At the same time, the backup button becomes stop button. You can view the remaining time and process bar at the left bottom.

- File format: Click the file format; you can see there are two options: DAV/ASF.
- Picture backup: Please set the corresponding time, channel and then select the type as PIC from the dropdown list. See Figure 4-31. Please click the Add button and then select the pictures. Click the Start button; you can copy the specified pictures to the selected portable devices.

![Figure 4-31](image)

- One key backup: It includes three steps: the search, select all, start the backup. You can skip the above three steps and then copy all the searched files directly. The file name format usually is: SN_CH+channel number+time Y+M+D+H+M+S. In the file name, the YDM format is the same as you set in general interface. (Main Menu ->Setting ->General). File extension name is .dav.

Tips:
During backup process, you can click ESC to exit current interface for other operation. The system will not terminate backup process.
Note:
When you click stop button during the burning process, the stop function becomes activated immediately. For example, if there are ten files, when you click stop system just backup five files, system only save the previous 5 files in the device (But you can view ten file names).

4.8 PTZ Control and Color Setup

Note: All the operations here are based on PELCOD protocol. For other protocols, there might be a little difference.

4.8.1 Cable Connection

Please follow the procedures below to go on cable connection
- Connect the dome RS485 port to 10.2-inch combo DVR 485 port.
- Connect dome video output cable to 10.2-inch combo DVR video input port.
- Connect power adapter to the dome.

4.8.2 PTZ Setup

Note: The camera video should be in the current screen. Before setup, please check the following connections are right:
- PTZ and decoder connection is right. Decoder address setup is right.
- Decoder A (B) line connects with 10.2-inch combo DVR A (B) line.

Boot up the 10.2-inch combo DVR, input user name and password. In the main menu, click setting, and then click Pan/Tilt Control button. The interface is shown as in Figure 4-32. Here you can set the following items:
- Channel: select the current camera channel.
- Protocol: select corresponding PTZ protocol (such as PELCOD)
- Address: default address is 1.
- Baud rate: select corresponding baud rate. Default value is 9600.
- Data bits: select corresponding data bits. Default value is 8.
- Stop bits: select corresponding stop bits. Default value is 1.
- Parity: there are three options: odd/even/none. Default setup is none.

![Figure 4-32](image)

After completing all the setting please click save button.
In one window display mode, right click mouse (click “Fn” Button in the front panel or click “Fn” key in the remote control). The interface is shown as in Figure 4-33.
Click Pan/Tilt/Zoom, the interface is shown as below. See Figure 4-34. Here you can set the following items:

- **Step**: value ranges from 1 to 8.
- **Zoom**
- **Focus**
- **Iris**

Please click icon 🗼 and ⚜️ to adjust zoom, focus and iris.

In Figure 4-34, please click direction arrows (See Figure 4-35) to adjust PTZ position. There are total 8 direction arrows. Please note system only supports up/down/left/right four directions if you use the front panel to control the direction.

4.8.3 3D Intelligent Positioning Key

In the middle of the eight direction arrows, there is a 3D intelligent positioning key. See Figure 4-36. Please make sure your protocol supports this function and you need to use mouse to control.
Click this key, system goes back to the single screen mode. Drag the mouse in the screen to adjust section size. The dragged zone supports 4X to 16X speeds. It can realize PTZ automatically. The smaller zone you dragged, the higher the speed.

Figure 4-36

Here is a sheet for you reference.

<table>

</table>

4.9 Preset/ Patrol/Pattern/Scan

In Figure 4-34, please click the “set” button or click the REC button at the front panel. The interface is shown as below. See Figure 4-37.
Here you can set the following items:

- Preset
- Tour
- Pattern
- Border

In Figure 4-34, click page switch button, the interface is shown as in Figure 4-38.
Here you can activate the following functions:

- Preset
- Tour
- Pattern
- Auto scan
- Auto pan
- Flip
- Reset
- Page switch
Note:
- Preset, tour and pattern all need the value to be the control parameter. You can define it as you require.
- You need to refer to your speed dome user's manual for Aux definition. In some cases, it can be used for special process.
- The following setups are usually operated in the Figure 4-34, Figure 4-37 and Figure 4-38.

4.9.1 Preset Setup
In Figure 4-34, use eight direction arrows to adjust camera to the proper position.
In Figure 4-37, click preset button and input preset number. The interface is shown as in Figure 4-39.
Now you can add this preset to one tour.

4.9.2 Activate Preset
In Figure 4-38, please input preset number in the No. blank, and click preset button.

4.9.3 Patrol setup (Tour Setup)
In Figure 4-37, click patrol button. The interface is shown as in Figure 4-40. Input preset number and add this preset to a patrol (tour). For each patrol (tour), you can input max 80 presets.
4.9.4 Activate Patrol (tour)
In Figure 4-37, input patrol (tour) number in the No. blank and click patrol button.

4.9.5 Pattern Setup
In Figure 4-37, click pattern button and then click “begin” button. The interface is shown as in Figure 4-41. Then you can go to Figure 4-34 to modify zoom, focus, and iris.
Go back to Figure 4-41 and click “end” button. You can memorize all these operations as pattern 1.

![Figure 4-41](image)

4.9.6 Activate Pattern Function
In Figure 4-38, input mode value in the No. blank, and click pattern button.

4.9.7 Auto Scan Setup
In Figure 4-37, click border button. The interface is shown as in Figure 4-42.
Please go to Figure 4-34, use direction arrows to select camera left limit
Then please go to Figure 4-42 and click left limit button
Repeat the above procedures to set right limit.

![Figure 4-42](image)

4.9.8 Activate Auto Scan
In Figure 4-38, click “Auto Scan” button, the system begins auto scan. Correspondingly, the auto scan button becomes Stop button. Click stop button to terminate scan operation.

4.10 Flip
In Figure 4-38, click page switch button (Or Fn button), you can see an interface is shown as below. See Figure 4-43. Here you can set auxiliary function. The aux value has relationship with the Aux button of the decoder. Click page switch button again, system goes back to Figure 4-34.

![Figure 4-43](image)

Please note the direction buttons are to control the speed dome menu. The button definition is defined by the speed dome protocol. The button becomes grey and invalid if current protocol does not support this function.

The up/down button is to switch between the items and the left/right button is to modify the setup.
5 Understanding of Menu Operations and Controls

5.1 Menu Tree

This series 10.2-inch combo DVR menu tree is shown as below.

```
Menu
  └── Backup
  │   └── Information
  │       ├── HDD Info
  │       │   ├── BPS
  │       │   └── Log
  │       └── Version
  └── Setting
       └── General
            ├── Encode
            │   └── Schedule
            └── RS232
       └── Network
            └── Alarm
                 └── Detect
                      └── Pan/ Tilt/Zoom
       └── Display
            └── Default
       └── Search
            └── Advanced
                 └── HDD Management
                      └── Alarm Output
                           └── Abnormality
                           └── Manual Record
                                └── Account
                                └── Auto Maintain
                                     └── TV Adjust
                                          └── Title Overlay
                                               └── Config Backup
       └── Shutdown
```

5.2 Main Menu

After you logged in, the system main menu is shown as below. See Figure 5-1. There are total six icons: search, Information, setting, backup, advanced and shutdown. Move the cursor to highlight the icon, then double click mouse to enter the sub-menu.
5.3 Setting

In main menu, highlight setting icon and double click mouse. System setting interface is shown as below. See Figure 5-2.

5.3.1 General

General setting includes the following items. See Figure 5-3.

- System time: Here is for you to set system time.
- Date format: There are three types: YYYY-MM-DD, MM-DD-YYYY, or DD-MM-YYYY.
- Snapshot: Here you can set snapshot interval.
- Date separator: There are three denotations to separate date: dot, beeline, and solidus.
- DST: Here you can set DST time and date. Please enable DST function and then click set button. You can see an interface is shown as in Figure 5-4. Here you can set start time and end time by setting corresponding week setup. In Figure 5-4, enable date button, you can see an interface is shown as in Figure 5-5. Here you can set start time and end time by setting corresponding date setup.
- Time format: There are two types: 24-hour mode or 12-hour mode.
- LCD shutdown: Here you can set the LCD auto shutdown time after system is invalid for the specified time. The max setup is 120 minutes.
- Language: System supports various languages: Chinese (simplified), Chinese (Traditional), English, Italian, Japanese, French, Spanish (All languages listed here are optional. Slight difference maybe found in various series.)
- HDD full: Here is for you to select working mode when hard disk is full. There are two options: stop recording or rewrite. If current working HDD is overwritten or the current HDD is full while the next HDD is no empty, then system stops recording. If the current HDD is full and then next HDD is not empty, then system overwrites the previous files.
- Pack duration: Here is for you to specify record duration. The value ranges from 60 to 120 minutes. Default value is 60 minutes.
- DVR No: When you are using one remote control (not included in the accessory bag) to control several DVRs, you can give a name to each DVR for your management.
- Video standard: There are two formats: NTSC and PAL.
- Auto logout: Here is for you to set auto logout interval once login user remains inactive for a specified time. The value ranges from 0 to 60 minutes.

**Note:**
Since system time is very important, do not modify time casually unless there is a must!
Before your time modification, please stop record operation first!
After completing all the setups please click save button, system goes back to the previous menu.

![Figure 5-3](image)

![Figure 5-4](image)
5.3.2 Encode
Encode setting includes the following items. See Figure 5-6.

- **Channel**: Select the channel you want.
- **Type**: Please select from the dropdown list. There are three options: regular/motion detect/alarm. You can set the various encode parameters for different record types.
- **Compression**: System supports H.264.
- **Resolution**: System supports various resolutions, you can select from the dropdown list. For this model, main stream supports D1/2CIF/CIF/QCIF. Please note the resolution may vary due to different channels. The extra stream supports CIF/QCIF only.
- **Frame rate**: It ranges from 1f/s to 25f/s in NTSC mode and 1f/s to 30f/s in PAL mode.
- **Bit rate type**: System supports two types: CBR and VBR. In VBR mode, you can set video quality.
- **Quality**: There are six levels ranging from 1 to 6. The sixth level has the highest image quality.
- **Video/audio**: You can enable or disable the video/audio.
- **Overlay**: Click overlay button, you can see an interface is shown in Figure 5-7.
  - **Cover area (Privacy mask)**: Here is for you to set privacy mask section. You can drag you mouse to set proper section size. In one channel video, system max supports 4 zones.
  - **Preview/monitor**: privacy mask has two types. Preview and Monitor. Preview means the privacy mask zone can not be viewed by user when system is in preview status. Monitor means the privacy mask zone can not be view by the user when system is in monitor status.
  - **Time display**: You can select system displays time or not when you playback. Please click set button and then drag the title to the corresponding position in the screen.
  - **Channel display**: You can select system displays channel number or not when you playback. Please click set button and then drag the title to the corresponding position in the screen.

Please highlight icon to select the corresponding function.
5.3.3 Schedule

Please refer to chapter 4.4 schedule.

5.3.4 RS232

RS232 interface is shown as below. There are five items. See Figure 5-8.
- Function: There are various devices for you to select. Console is for serial port or min-end platform to upgrade program. Keyboard is for you to use special keyboard to control current device.
- Baud rate: You can select proper baud rate.
- Data bit: You can select proper data bit. The value ranges from 5 to 8.
- Stop bit: There are two values: 1/2.
- Parity: There are five choices: none/odd /even/mark/space.

System default setup is:
- Function: Console
- Baud rate:115200
- Data bit:8
- Stop bit:1
- Parity: None

After completing all the setups please click save button, system goes back to the previous menu.
5.3.5 Network
Here is for you to input network information. See Figure 5-9.
- IP address: Here you can input IP address.
- DHCP: It is to auto search IP. When enable DHCP function, you can not modify IP/Subnet mask/Gateway. These values are from DHCP function. If you have not enabled DHCP function, IP/Subnet mask/Gateway display as zero. You need to disable DHCP function to view current IP information. Besides, when PPPoE is operating, you can not modify IP/Subnet mask/Gateway.
- TCP port: Default value is 37777.
- UDP port: Default value is 37778.
- HTTP port: Default value is 80.
- RTSP port: Default value is 554.
- Max connection: system support maximal 20 users. 0 means there is no connection limit.
- Preferred DNS server: DNS server IP address.
- Alternate DNS server: DNS server alternate address.
- Transfer mode: Here you can select the priority between fluency/video qualities.
- LAN download: System can process the downloaded data first if you enable this function. The download speed is 1.5X or 2.0X of the normal speed.

After completing all the setups please click save button, system goes back to the previous menu.
5.3.5.1 Advanced Setup
Advanced setup interface is shown as in Figure 5-10. Please draw a circle to enable corresponding function and then double click current item to go to setup interface.

5.3.5.2 IP Filter
IP filter interface is shown as in Figure 5-11. You can add IP in the following list. The list supports max 64 IP addresses.
Please note after you enabled this function, only the IP listed below can access current 10.2-inch combo DVR.
If you disable this function, all IP addresses can access current 10.2-inch combo DVR.
5.3.5.3 Multiple Cast Setup

Multiple-cast setup interface is shown as in Figure 5-12.

Figure 5-12

Here you can set a multiple cast group. Please refer to the following sheet for detailed information.

- **IP multiple cast group address**
  -224.0.0.0-239.255.255
- **“D” address space**
  - The higher four-bit of the first byte="1110"
- **Reserved local multiple cast group address**
  -224.0.0.0-224.0.0.255
- **TTL=1 When sending out telegraph**
- **For example**
  - 224.0.0.1 All systems in the sub-net
  - 224.0.0.2 All routers in the sub-net
  - 224.0.0.4 DVMRP router
  - 224.0.0.5 OSPF router
  - 224.0.0.13 PIMv2 router
- **Administrative scoped addressees**
  -239.0.0.0-239.255.255
- **Private address space**
  - Like the single broadcast address of RFC1918
  - Can not be used in Internet transmission
  - Used for multiple cast broadcast in limited space.

Except the above mentioned addresses of special meaning, you can use other addresses. For example:

**Multiple cast IP: 235.8.8.36**
**Multiple cast PORT: 3666**

After you logged in the Web, the Web can automatically get multiple cast address and add it to the multiple cast groups. You can enable real-time monitor function to view the view.

Please note multiple cast function is for special series only.

5.3.5.4 PPPoE

PPPoE interface is shown as in Figure 5-13.

Input “PPPoE name” and “PPPoE password” you get from your ISP (Internet service provider).

Click save button, you need to restart to activate your configuration.

After rebooting, 10.2-inch combo DVR will connect to internet automatically. The IP in the PPPoE is the 10.2-inch combo DVR dynamic value. You can access this IP to visit the unit.
5.3.5.5 NTP Setup
You need to install SNTP server (Such as Absolute Time Server) in your PC first. In Windows XP OS, you can use command “net start w32time” to boot up NTP service.
NTP setup interface is shown as in Figure 5-14.
- Host IP: Input your PC address.
- Port: This series 10.2-inch combo DVR supports TCP transmission only. Port default value is 123.
- Update interval: minimum value is 1. Max value is 65535. (Unit: minute)
- Time zone: select your corresponding time zone here.
Here is a sheet for your time zone setup.

<table>

Figure 5-14
5.3.5.6 DDNS Setup

DDNS setup interface is shown as in Figure 5-15.

You need a PC to login the internet and then use the registered dynamic domain to access the DVR.

In network DDNS, please select DDNS type and highlight enable item. Then please input your PPPoE name you get from you IPS and server IP (PC with DDNS). Click save button and then reboot system.

Click save button, system prompts for rebooting to get all setup activated.

After rebooting, open IE and input as below:

http://(DDNS server IP)/(virtual directory name)/webtest.htm

e.g.: http://10.6.2.85/ 10.2-inch combo DVR _DDNS/webtest.htm.)

Now you can open DDNNServer web search page.

![DDNS Setup Interface](image)

**Figure 5-15**

Please note NNDS type includes: CN99 DDNS, NO-IP DDNS, Private DDNS and Dyndns DDNS. The Private DDNS works with special DDNS server and PSS software.

5.3.5.7 FTP

You need to download or buy FTP service tool (such as Ser-U FTP SERVER) to establish FTP service.

Please install Ser-U FTP SERVER first. From “start” -> “program” -> Serv-U FTP Server -> Serv-U Administrator. Now you can set user password and FTP folder. Please note you need to grant write right to FTP upload user. See Figure 5-16.
You can use a PC or FTP login tool to test setup is right or not. For example, you can login user ZHY to FTP://10.10.7.7 and then test it can modify or delete folder or not. See Figure 5-17.

System also supports upload multiple DVRs to one FTP server. You can create multiple folders under this FTP. In Figure 5-9, select FTP and then double click mouse. You can see the following interface. See Figure 5-18.
Please highlight the icon □ in front of Enable to activate FTP function. Here you can input FTP server address, port and remote directory. When remote directory is null, system automatically create folders according to the IP, time and channel. User name and password is the account information for you to login the FTP. File length is upload file length. When setup is larger than the actual file length, system will upload the whole file. When setup here is smaller than the actual file length, system only uploads the set length and auto ignore the left section. When interval value is 0, system uploads all corresponding files.

After completed channel and weekday setup, you can set two periods for one each channel.

5.3.5.8 UPNP
The UPNP protocol is to establish a mapping relationship between the LAN and the WAN. Please input the router IP address in the LAN in Figure 5-9. Double click the UPNP item in Figure 5-10, you can see the following interface. See Figure 5-19.

- UPNP on/off: Turn on or off the UPNP function of the device.
- Status: When the UPNP is offline, it shows as “Unknown”. When the UPNP works it shows “Success”
- Router LAN IP: It is the router IP in the LAN.
- WAN IP: It is the router IP in the WAN.
- Port Mapping list: The port mapping list here is the one to one relationship with the router’s port mapping setting.
  - Enable Switch: It shows that the function of port mapping is enabled in this port.
  - List:
    - Service name: Defined by user.
    - Protocol: Protocol type
    - Internal port: Port that has been mapped in the router.
    - External port: Port that has been mapped locally.
  - Default: UPNP default port setting is the HTTP, TCP and UDP of the DVR.
  - Add to the list: Click it to add the mapping relationship.
  - Delete: Click it to remove one mapping item.

Double click one item; you can change the corresponding mapping information. See Figure 5-20.

Important:
When you are setting the router external port, please use 1024~5000 port. Do not use well-known port 1~255 and the system port 256~1023 to avoid conflict.
For the TCP and UDP, please make sure the internal port and external port are the same to guarantee the proper data transmission.
5.3.5.9 Email
The email interface is shown as below. See Figure 5-21.

- SMTP server: Please input your email SMTP server IP here.
- Port: Please input corresponding port value here.
- User name: Please input the user name to login the sender email box.
- Password: Please input the corresponding password here.
- Sender: Please input sender email box here.
- Title: Please input email subject here. System support English character and Arabic number. Max 32-digit.
- Receiver: Please input receiver email address here. System max supports 3 email boxes.
- SSL enable: System supports SSL encryption box.
- Interval: The send interval ranges from 0 to 3600 seconds. 0 means there is no interval.
- Health email enable: Please check the box here to enable this function. This function allows the system to send out the test email to check the connection is OK or not.
Interval: Please check the above box to enable this function and then set the corresponding interval. System can send out the email regularly as you set here. Click the Test button, you can see the corresponding dialogue box to see the email connection is OK or not. See Figure 5-22.

Please note system will not send out the email immediately when the alarm occurs. When the alarm, motion detection or the abnormity event activates the email, system sends out the email according to the interval you specified here. This function is very useful when there are too many emails activated by the abnormity events, which may result in heavy load for the email server.

![Figure 5-21](image)

![Figure 5-22](image)

5.3.6 Alarm
Please refer to chapter 4.6 Alarm Setup and Activation.

5.3.7 Detect
Please refer to chapter 4.5 Detect.

5.3.8 Pan/Tilt/Zoom
The pan/tilt/zoom setup includes the following items. Please select channel first. See Figure 5-23.

- Protocol: Select corresponding PTZ protocol such as PELCOD.
- Address: input corresponding PTZ address.
- Baud rate: Select baud rate.
- Data bit: Select data bit.
• Stop bit: Select stop bit.
• Parity: There are three choices: none/odd/even.

After completed all the setups please click save button, system goes back to the previous menu.
For detailed setup, please refer to chapter 4.9 preset/patrol/pattern/scan.

Figure 5-23

5.3.9 Display
Display setup interface is shown as below. See Figure 5-24.
• Transparency: Here is for you to adjust transparency. The value ranges from 128 to 255.
• Channel name: Here is for you to modify channel name. System max support 25-digit (The value may vary due to different series). Please note all your modification here only applies to 10.2-inch combo DVR local end. You need to open web or client end to refresh channel name.
• Time display: You can select to display time or not when system is playback.
• Channel display: You can select to channel name or not when system is playback.
• Resolution: There is only one option: 800 × 600.
• Display mode: you can select from the dropdown list.
• Enable tour: Activate tour function.
• Interval: Input proper interval value here. The value ranges from 5-120 seconds. In tour process, you can use mouse or click Shift to turn on window switch function. ✰ Stands for opening switch function, ✰ stands for closing switch function.
• Motion tour type: System support 1/8 window tour.
• Alarm tour type: System support 1/8 window tour.

Please highlight icon ✰ to select the corresponding function.
After completing all the setups please click save button, system goes back to the previous menu.
In Figure 5-24, click modify button after channel. You can see an interface is shown as in Figure 5-25. Please note all your modification here applies to local end only. You need to refresh web or client-end to get the latest channel name. System max support 25-digital character.

In tour mode, you can see the following interface. On the right corner, right click mouse or click shift button, you can control the tour. There are two icons:  stands for enabling window switch and  stands for enabling window function. See Figure 5-26.

Screen Calibration
Please note this function is for touch panel series product only.
You can set the touch panel if necessary. Please continuously click the cursor to calibrate until you see a dialogue box “The screen successfully calibrated”. See Figure 5-27 and Figure 5-28.

![Figure 5-27](image)

![Figure 5-28](image)

**5.3.10 Default**

Click default icon, system pops up a dialogue box. You can highlight to restore default factory setup. See Figure 5-29.

- Select all
- General
- Encode
- Schedule
- RS232
- Network
- Alarm
- Detect
- Pan/tilt/zoom
• Display
• Channel name

Please highlight icon  to select the corresponding function.
After all the setups please click save button, system goes back to the previous menu.

Warning!
• System menu color, language, time display mode, video format, IP address, user account will not maintain previous setup after default operation!
• System needs to reboot to activate current setup!
• You need to implement the screen calibration operation (Chapter 5.3.9) after system restored default setup!

Figure 5-29

5.4 Search

Please refer to chapter 4.3 Search.

5.5 Advanced

Double click advanced icon in the main window, the interface is shown as below. See Figure 5-30. There are total seven function keys: HDD management, alarm output, abnormity, manual record, account, auto maintenance, and TV adjust.
5.5.1 HDD Management
Here is for you to view and implement hard disk management. See Figure 5-31. You can see current HDD type, status, capacity and record time. When HDD is working properly, system is shown as O. When HDD error occurred, system is shown as X. You can select HDD mode from the dropdown list such as read-only or you can erase all data in the HDD. Please note system needs to reboot to get all the modification activated.

![Figure 5-31](image)

Click alarm set button, the interface is shown as below. See Figure 5-32. (This interface is just like the abnormity setup). Please refer to chapter 5.5.2 for detailed information.

Please highlight icon to select the corresponding function.

![Figure 5-32](image)

5.5.2 Abnormity
Abnormity interface is shown as in Figure 5-33.
- Event type: There are several options for you such as disk error, no disk, disconnection, IP conflict and etc.
- Alarm output: Please select alarm activation output port.
- **Latch**: Here you can set corresponding delaying time. The value ranges from 10s-300s. System automatically delays specified seconds in turning off alarm and activated output after external alarm cancelled.
- **Show message**: system can pop up the message in the local screen to alert you when alarm occurs.
- **Alarm upload**: System can upload the alarm signal to the network (including alarm centre) if you enabled current function.
- **Send email**: System can send out email to alert you when an alarm occurs.
- **Buzzer**: Highlight icon to enable this function. The buzzer beeps when an alarm occurs.

![Figure 5-33](image)

**5.5.3 Alarm Output**
Here is for you to set proper alarm output.

Please highlight icon to select the corresponding alarm output.

After all the setups please click OK button, system goes back to the previous menu. See Figure 5-34.

![Figure 5-34](image)

**5.5.4 Manual Record**
Please refer to chapter 4.2.2 manual record.

**5.5.5 Account**
Here is for you to implement account management. See Figure 5-35X. Here you can:

- Add new user
- Modify user
- Add group
- Modify group
- Modify password.

For account management please note:

- For the user account name and the user group, the string max length is 6-byte. The backspace in front of or at the back of the string is invalid. There can be backspace in the middle. The string includes the valid character, letter, number, underline, subtraction sign, and dot.
- System account adopts two-level management: group and user. No limit to group or user amount.
- For group or user management, there are two levels: admin and user.
- The user name and group name can consist of eight bytes. One name can only be used once. There are four default users: admin/888888/666666 and hidden user “default”. Except user 6666, other users have administrator right.
- Hidden user “default” is for system interior use only and can not be deleted. When there is no login user, hidden user “default” automatically login. You can set some rights such as monitor for this user so that you can view some channel view without login.
- One user should belong to one group. User right can not exceed group right.
- About reusable function: this function allows multiple users use the same account to login.

After all the setups please click save button, system goes back to the previous menu.

![ACCOUNT](image)

Figure 5-35

5.5.5.1 Modify Password

Click password button, the interface is shown as in Figure 5-36.

Here you can modify account password.

Please select the account from the dropdown list, input the old password and then input the new password twice. Click the Save button to confirm current modification.

For the users of user account right, it can modify password of other users.
5.5.5.2 Add/Modify Group
Click add group button, the interface is shown as below. See Figure 5-37. Here you can input group name and then input some memo information if necessary. There are total 60 rights such as control panel, shut down, real-time monitor, playback, record, record file backup, PTZ, user account, system information view, alarm input/output setup, system setup, log view, clear log, upgrade system, control device and etc. The modify group interface is similar to the Figure 5-37.

5.5.5.3 Add/Modify User
Click add user button, the interface is shown as in Figure 5-38. Please input the user name, password, select the group it belongs to from the dropdown list. Then you can check the corresponding rights for current user. For convenient user management, usually we recommend the general user right is lower than the admin account. The modify user interface is similar to Figure 5-38.
5.5.6 Auto Maintain
Here you can set auto-reboot time and auto-delete old files setup. See Figure 5-39. You can select proper setup from dropdown list. After all the setups please click save button, system goes back to the previous menu.

Figure 5-39

5.5.7 TV Adjust
Here is for you to adjust TV output setup. See Figure 5-40. Please drag slide bar to adjust each item. After all the setups please click OK button, system goes back to the previous menu.

Figure 5-40

5.5.8 Card Overlay
The card overlay function is for financial areas. It includes Sniffer, information analysis and title overlay function. The Sniffer mode includes COM and network.

5.5.8.1 COM Type
The COM interface is shown as below. See Figure 5-41.
- Protocol: Please select from the dropdown list.
- Setting: Click COM setting button, the interface is shown as in RS232 interface. Please refer to Chapter 5.3.4 RS232.
- Overlay channel: Please select the channel you want to overlay the card number.
- Overlay mode: There are two options: preview and encode. Preview means overlay the card number in the local monitor video. Encode means overlay the card number in the record file.
- Overlay Position: Here you can select the proper overlay position from the dropdown list.

![Figure 5-41](image)

5.5.8.2 Network Type
The network type interface is shown as below. See Figure 5-42.
Here we take the ATM/POS protocol to continue.
There are two types: with or without the protocol according to client’s requirements.

**With the protocol**
For ATM/POS with the protocol, you just need to set the source IP, destination IP (sometimes you need to input corresponding port number).

![Figure 5-42](image)
Without the protocol
For the ATM/POS without the protocol, the interface is shown as in Figure 5-43.
Source IP refers to host IP address that sends out information (usually it is the device host.)
Destination IP refers to other systems that receive information.
Usually you do not need to set source port and target port.
There are total four groups IP. The record channel applies to one group (optional) only.
Six frame ID groups verification can guarantee information validity and legal.

![Figure 5-43](image)

Click Data button you can see an interface is shown as in Figure 5-44.
Here you can set offset value, length, title according to your communication protocol and data package.

![Figure 5-44](image)

5.5.9 Config File Backup
The configuration file backup interface is shown as below. See Figure 5-45.
This function allows you to copy current system configuration to other devices.
5.6 Information

Here is for you to view system information. There are total five items: HDD (hard disk information), BPS (data stream statistics), Log and version, and online user. See Figure 5-46.

5.6.1 HDD Information

Here is to list hard disk type, total space, free space, video start time and status. See Figure 5-47.

○ means current HDD is normal. X means there is error. - means there is no HDD.

If disk is damaged, system shows as “?”. Please remove the broken hard disk before you add a new one.

Once there is a hard disk confliction, please check hard disk time and system time is the same or not. Please go to setting then general to modify system time. At last, reboot the system to solve this problem.

After system booted up, if there is any confliction, system goes to HDD information interface directly. Please note, system does not ask you to deal with it forcefully.
When HDD confliction occurs, you can check system time and HDD time are identical or not. If they are not identical, please go to General (Chapter 5.3.1) to adjust system time or go to HDD Management (Chapter 5.5.1) to format HDD and then reboot the 10.2-inch combo DVR.

![HDD INFO](image1)

**Figure 5-47**

**Tips:**
Please click Fn button or left click mouse to view HDD record time and HDD type and time.

**5.6.2 BPS**
Here is for you to view current video data stream (KB/s) and occupied hard disk storage (MB/h). See Figure 5-48.

![BPS](image2)

**Figure 5-48**

**5.6.3 Log**
Here is for you to view system log file. System lists the following information. See Figure 5-49. Log types include system operation, configuration operation, data management, alarm event, record operation, log clear and etc.

Please select start time and end time, then click search button. You can view the log files. System max displays 100 logs in one page. It can max save 1024 log files. Please page up/down button to view if there are more than ten files.
System also supports the backup function; you can click the backup button to save the log files in the USB devices.

![Figure 5-49](image)

Click the Details button or double click the log item, you can view the detailed information. See Figure 5-50.

![Figure 5-50](image)

5.6.4 Version

Here is for you to view some version information. See Figure 5-51.

- Channel
- Alarm in
- Alarm out
- System version:
- Build Date
5.6.5 Online Users
Here is for you manage online users. See Figure 5-52.
You can disconnect one user or block one user if you have proper system right. Max
disconnection setup is 65535 seconds.

5.7 Shutdown
Double click shutdown button, system pops up a dialogue box for you to select. See Figure 5-53.
• Logout menu user: log out menu. You need to input password when you login the next time.
• Restart application: reboot 10.2-inch combo DVR.
• Shutdown: system shuts down and turns off power.
• Restart system: system begins rebooting.
• Switch user: you can use another account to log in.
Figure 5-53
6 About Auxiliary Menu

6.1 Go to Pan/Tilt/Zoom Menu

In the one-window surveillance mode, right click mouse (click “fn” Button in the front panel or click AUX key in the remote control). The interface is shown as below: See Figure 6-1.

![Figure 6-1](image1)

Click Pan/Tilt/Zoom, the interface is shown as in Figure 6-2.

Here you can set the following items:

- Zoom
- Focus
- Iris

Please click icon and to adjust zoom, focus and Iris.

![Figure 6-2](image2)

In Figure 6-2, please click direction arrows (See Figure 6-3) to adjust PTZ position. There are totally eight direction arrows. Please note system only supports up/down/left/right four directions if you use the front panel to control the direction.

![Figure 6-3](image3)

6.1.1 3D Intelligent Positioning Key

In the middle of the eight direction arrows, there is a 3D intelligent positioning key. See Figure 6-4. Please make sure your protocol supports this function and you need to use mouse to control.
Click this button, system goes back to the single screen mode. Drag the mouse in the screen to adjust section size.

Figure 6-4

Here is a sheet for you reference.

6.2 Preset /Patrol / Pattern /Border Function

In Figure 6-2 click the set button. The interface is shown as below:

Here you can set the following items:
- Preset
- Patrol
- Pattern
- Border

Figure 6-5

In Figure 6-2, click page switch button, you can see an interface as in Figure 6-6.

Here you can activate the following functions:
- Preset
- Tour(Patrol)
- Pattern
- Auto scan
- Auto pan
- Flip
- Page Switch

Figure 6-6
6.2.1 Preset Setup

Note: The following setups are usually operated in the Figure 6-2, Figure 6-5 and Figure 6-6. In Figure 6-2, use eight direction arrows to adjust camera to the proper position. In Figure 6-5, click preset button and input preset number. The interface is shown as in Figure 6-7. Add this preset to one patrol number.

![Figure 6-7](image)

6.2.2 Activate Preset

In Figure 6-6 please input preset number in the No. blank, and click preset button.

6.2.3 Patrol Setup

In Figure 6-5, click patrol button. The interface is shown as in Figure 6-8. Input preset number and then add this preset to one patrol.

![Figure 6-8](image)

6.2.4 Activate Patrol

In Figure 6-6, input patrol number in the No. blank and click patrol button.

6.2.5 Pattern Setup

In Figure 6-5, click pattern button and then click begin button. The interface shows like Figure 6-9. Please go to Figure 6-2 to modify zoom, focus, and iris. Go back to Figure 6-9 and click end button. You can memorize all these setups as pattern 1.

![Figure 6-9](image)
6.2.6 Activate Pattern Function
In Figure 6-6 input mode value in the No. blank, and click pattern button.

6.2.7 Border Setup
In Figure 6-5, click border button. The interface is shown as in Figure 6-10.
Please go to Figure 6-2, use direction arrows to select camera left limit, and then please go to Figure 6-10 and click left limit button
Repeat the above procedures to set right limit.

![Figure 6-10]

6.2.8 Activate Border Function
In Figure 6-6, click auto scan button, the system begins auto scan. Correspondingly, the auto scan button changes to stop button.
Click stop button to terminate scan operation.

6.2.9 Flip
In Figure 6-6, click page switch button, you can see an interface is shown as below. See Figure 6-11. Here you can set auxiliary function.
Click page switch button again, system goes back to Figure 6-2.

![Figure 6-11]
7 WEB OPERATION

There might be slightly difference in the interface due to different series. The following operation is based on the 8-channel series product.

7.1 Network Connection

Before web operation, please check the following items:

- Network connection is right
- 10.2-inch combo DVR and PC network setup is right. Please refer to network setup (main menu->setting->network)
- Use order ping ***.***.***.***(* 10.2-inch combo DVR IP address) to check connection is OK or not. Usually the return TTL value should be less than 255.
- Open the IE and then input 10.2-inch combo DVR IP address.
- System can automatically download latest web control and the new version can overwrite the previous one.
- If you want to un-install the web control, please run uninstall webrec2.0.bat. Or you can go to C:\Program Files\webrec to remove single folder. Please note, before you un-install, please close all web pages, otherwise the un-installation might result in error.

7.2 Login

Open IE and input 10.2-inch combo DVR address in the address column. For example, if your 10.2-inch combo DVR IP is 10.10.3.16, then please input http://10.10.3.16 in IE address column. See Figure 7-1

System pops up warning information to ask you whether install webrec.cab control or not. Please click yes button.

If you can’t download the ActiveX file, please modify your settings as follows. See Figure 7-2.

---

**Figure 7-1**

Input your IP address here.
After installation, the interface is shown as below. See Figure 7-3.

Please input your user name and password.

Default factory name is admin and password is admin.

**Note:** For security reasons, please modify your password after you first login.

After you logged in, you can see the main window. See Figure 7-6.

This main window can be divided into the following sections.
Section 1: there are five function buttons: configuration (chapter 7.3), search (chapter 7.4), alarm (chapter 7.5), about (chapter 7.6), log out (chapter 7.7).

Section 2: there are channel number and three function buttons: start dialog and local play, refresh.

Section 3: there are PTZ (chapter 7.2.2), color (chapter 7.2.3) button and you can also select picture path and record path.

Section 4: real-time monitor window. Please note current preview window is circled by a green rectangle zone.

Section 5: Here you can view window switch button. You can also select video priority between fluency or real-time.

System monitor window switch supports full screen/1-window/4-window/6-window/8-window/9-window/13-window/16-window/20-window/25-window/36-window. See Figure 7-4.

Figure 7-4

_preview window switch. System support 1/4/8/9/16-window real-time preview. Please you need to have the proper rights to implement preview operation. You can not preview if you have no right to preview the either channel. See Figure 7-5. Please note this series device does not support this function.

Figure 7-5

Figure 7-6
7.2.1 Real-time Monitor

In section 2, left click the channel name you want to view, you can see the corresponding video in current window.

On the top left corner, you can view device IP, channel number, network monitor bit stream.

![Device IP, Channel Number, Network Monitor Bit Stream]

Figure 7-7

On the top right corner, there are six function buttons. See Figure 7-8.

![Function Buttons]

Figure 7-8

- 1: Digital zoom: Click this button and then left drag the mouse in the zone to zoom in. right click mouse system restores original status.
- 2: Change show mode: resize or switch to full screen mode.
- 3: Local record. When you click local record button, the system begins recording and this button becomes highlighted. You can go to system folder RecordDownload to view the recorded file.
- 4: Capture picture. You can snapshot important video. All images are memorized in system client folder 'download\picture (default).
- 5: Audio :Turn on or off audio.(It has no relationship with system audio setup )
- 6: Close video.

Please refer to Figure 7-9 for main stream and extra stream switch information.
Open All
You can click it to open all channels.

Refresh
You can use button to refresh camera list.

Start Dialogue
You can click this button to enable audio talk. Click 【▼】 to select bidirectional talk mode.
There are two options: DEFAULT/G711a.
Please note, the audio input port from the device to the client-end is using the first channel audio input port. During the bidirectional talk process, system will not encode the audio data from the 1-channel.

Local Play
The Web can playback the saved (Extension name is dav) files in the PC-end.
Click local play button, system pops up the following interface for you to select local play file. See Figure 7-10.
7.2.2 PTZ
Before PTZ operation, please make sure you have properly set PTZ protocol. (Please refer to chapter 7.3.2 Setting-> Pan/Tilt/Zoom).
Click PTZ button, the interface is shown as in Figure 7-11.

7.2.2.1 Direction key and 3D positioning key
In Figure 7-10, there are eight direction keys.
In the middle of the eight direction keys, there is a 3D intelligent positioning key.
Click 3D intelligent positioning key, system goes back to the single screen mode. Drag the mouse in the screen to adjust section size. It can realize PTZ automatically.

7.2.2.2 Speed
System supports eight-level speed. You can select from the dropdown list. Speed 2 is faster than speed 1.

7.2.2.3 Zoom/Focus/Iris
Here is a sheet for you reference.

<table>
<thead>
<tr>
<th>Name</th>

In Figure 7-11, click PTZ setup button you can see the following interface. See Figure 7-12.

7.2.2.4 Auto Scan
In Figure 7-12, move the camera to your desired location and then click left limit button. Then move the camera again and then click right limit button to set a right limit.

7.2.2.5 Pattern
In Figure 7-12, you can input pattern value and then click start record button to begin PTZ movement. Please go back to Figure 7-11 to implement camera operation. Then you can click stop record button. Now you have set one pattern.

7.2.2.6 Preset
In Figure 7-12, move the camera to your desired location and then input preset value. Click add button, you have set one preset.

7.2.2.7 Auto tour
In Figure 7-12, input auto tour value and preset value. Click add button, you have added one preset in the tour.
Repeat the above procedures you can add more presets in one tour.

7.2.2.8 Assistant
You can select the assistant item from the dropdown list. See Figure 7-13.

7.2.2.9 Matrix
This series product supports matrix extension function. You can control the video input and output switch.

7.2.2.10 Light and wiper
If your PTZ protocol supports the light and wiper control function. You can enable/disable the light or the wiper.

7.2.3 Color
Click color button in section 3, the interface is shown as Figure 7-14. Here you can select one channel and then adjust its brightness, contrast, hue and saturation. (Current channel border becomes green). Or you can click default button to use system default setup.

7.2.4 Picture Path and Record Path
Click more button in Figure 7-14, you can see an interface is shown as in Figure 7-15.
Click the record item; you can see there are two options: DAV/ASF. Click picture path button, you can see an interface is shown as in Figure 7-16. Please click choose button to modify path.

Click record path button, you can see an interface is shown as in Figure 7-17. Please click choose button to modify path.

Click reboot button, system pops up the following dialogue box. See Figure 7-18, Please click OK to reboot.

If there is local use logged in the system menu, or the Web logged in user has no right to reboot the device system pops up a dialogue box to alert you.
7.3 Configure

7.3.1 System Information

7.3.1.1 Version Information

Here you can view device hardware feature and software version information. See Figure 7-19.

Figure 7-19

7.3.1.2 HDD information

Here you can view local storage status and network status including, free capacity and total capacity. See Figure 7-20.

Figure 7-20
7.3.1.3 Log

Here you can view system log. See Figure 7-21.

![Figure 7-21](image)

Click backup button, the interface is shown as in Figure 7-22.

![Figure 7-22](image)

Please refer to the following sheet for log parameter information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type</td>
<td>Log types include: system operation, configuration operation, data management, alarm event, record operation, user management, log clear and file operation.</td>
</tr>
<tr>
<td>Search</td>
<td>You can select log type from the drop down list and then click search button to view the list.</td>
</tr>
<tr>
<td>Clear</td>
<td>You can click this button to delete all displayed log files. Please note system does not support clear by type.</td>
</tr>
<tr>
<td>Backup</td>
<td>You can click this button to backup log files to current PC.</td>
</tr>
</tbody>
</table>
7.3.2 System Configuration
Please click save button to save your current setup.

7.3.2.1 General Setup
Here you can set system time, record length, video format and etc. See Figure 7-23

Please refer to the following sheet for detailed information.
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Time</td>
<td>Here is for you to modify system time. Please click Save button after your completed modification</td>
</tr>
<tr>
<td>Sync PC</td>
<td>You can click this button to save the system time as your PC current time.</td>
</tr>
<tr>
<td>Data Format</td>
<td>Here you can select data format from the dropdown list.</td>
</tr>
<tr>
<td>Data Separator</td>
<td>Please select separator such as – or /.</td>
</tr>
<tr>
<td>Time Format</td>
<td>There are two options: 24-H and 12-H.</td>
</tr>
<tr>
<td>DST</td>
<td>Here you can set day night save time begin time and end time. See Figure 7-24 and Figure 7-25.</td>
</tr>
<tr>
<td>Language</td>
<td>You can select the language from the dropdown list. Device needs to reboot to get the modification activated.</td>
</tr>
<tr>
<td>HDD Full</td>
<td>There are two options: stop recording or overwrite the previous files when HDD is full. When current working HDD is overwriting or it is full now, system stops record. If current working HDD is full now, system goes to overwrite the previous file.</td>
</tr>
<tr>
<td>Pack Duration</td>
<td>Here you can select file size. The value ranges from 1 to 120. Default setup is 60 minutes.</td>
</tr>
<tr>
<td>Device No</td>
<td>Please input device name here.</td>
</tr>
<tr>
<td>Video Standard</td>
<td>There are two options: PAL/NTSC. Please note, for the Web user, this information is for reference only. You can not modify.</td>
</tr>
</tbody>
</table>

7.3.2.2 Encode

Encode interface is shown as in Figure 7-26.
Figure 7-26

Figure 7-27

Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Channel</td>
<td>Here is for you to select a monitor channel.</td>
</tr>
<tr>
<td>Channel Name</td>
<td>Here is to display current channel name. You can modify it.</td>
</tr>
<tr>
<td>Compression</td>
<td>H.264</td>
</tr>
<tr>
<td>Main Stream</td>
<td>It includes main stream, motion stream and alarm stream. You can select different encode frame rates form different recorded events. For example, you can use high frame rate to record important events, record scheduled event in lower frame rate and it allows you to set different frame rates for motion detection record and alarm record.</td>
</tr>
<tr>
<td>Extra Stream</td>
<td>Select extra stream if you enabled the extension stream to monitor.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Function</td>
</tr>
<tr>
<td>---------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Audio/Video</td>
<td>For the main stream, recorded file only contains video by default. You need to draw a circle here to enable audio function. For extra stream, you need to draw a circle to select the video first and then select the audio if necessary.</td>
</tr>
<tr>
<td>Resolution</td>
<td>Main stream resolution supports D1/2CIF/CIF/QCIF. Extra stream of channel 1 to channel 8 support CIF/QCIF only. The different channel support different resolution, the frame rate may vary too.</td>
</tr>
<tr>
<td>Frame Rate</td>
<td>PAL: 1<del>25f/s; NTSC: 1</del>30f/s</td>
</tr>
<tr>
<td>Bit Rate Type</td>
<td>There are two options: VBR and CBR. Please note, you can set video quality in VBR mode only.</td>
</tr>
<tr>
<td>Quality</td>
<td>The value ranges from 1 to 6. The level 6 is the best video quality.</td>
</tr>
<tr>
<td>Bit Rate</td>
<td>• In CBR, the bit rate here is the max value. In dynamic video, system needs to low frame rate or video quality to guarantee the value.</td>
</tr>
<tr>
<td></td>
<td>• The value is null in VBR mode.</td>
</tr>
<tr>
<td></td>
<td>• Please refer to recommend bit rate for the detailed information.</td>
</tr>
<tr>
<td>Recommended Bit</td>
<td>Recommended bit rate value according to the resolution and frame rate you have set.</td>
</tr>
<tr>
<td>Color Setting</td>
<td>Here you can set video brightness, contrast, hue, saturation and gain. The value ranges from 0 to 100. Default value is 50. See Figure 7-27. Please note, some series devices do not support OSD transparent setup function.</td>
</tr>
<tr>
<td>Cover area (privacy mask)</td>
<td>• Here you can privacy mask the specified video in the monitor video. One channel max supports 4 privacy mask zones. The privacy mask includes two options: Never/monitor. Never: It means do not enable privacy mask function. Monitor: the privacy mask zone can not be viewed in monitor mode.</td>
</tr>
<tr>
<td>Time Title</td>
<td>• You can enable this function so that system overlays time information in video window.</td>
</tr>
<tr>
<td></td>
<td>• OSD transparent value ranges from 0 to 255. 0 means complete transparent.</td>
</tr>
<tr>
<td></td>
<td>• You can use the mouse to drag the time tile position.</td>
</tr>
<tr>
<td>Channel Title</td>
<td>• You can enable this function so that system overlays channel information in video window.</td>
</tr>
<tr>
<td></td>
<td>• OSD transparent value ranges from 0 to 255. 0 means complete transparent.</td>
</tr>
<tr>
<td></td>
<td>• You can use the mouse to drag the channel tile position.</td>
</tr>
<tr>
<td>Copy</td>
<td>It is a shortcut menu button. You can copy current channel setup to one or more channels. The interface is shown as in Figure 7-28.</td>
</tr>
<tr>
<td>Save</td>
<td>You can click save button after you complete setup for one channel, or you can complete the whole setups and then click save button.</td>
</tr>
<tr>
<td>Refresh</td>
<td>Click this button to get device latest configuration information.</td>
</tr>
</tbody>
</table>

Click copy interface, the interface is shown as in Figure 7-28.
If you have completed the setup for channel 1, you can click 3 to copy current setup to channel 3. Or you can click 2, 3, and 4 to copy current setup to channel 2, channel 3 and channel 4.

Figure 7-28

7.3.2.3 Schedule
Here you can set different periods for various days. There are max six periods in one day. See Figure 7-29

Figure 7-29
Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Channel</td>
<td>Please select a channel first.</td>
</tr>
<tr>
<td>Pre-record</td>
<td>Please input pre-record value here. System can record the three to five seconds video before activating the record operation into the file. (Depends on data size).</td>
</tr>
</tbody>
</table>
| Setup     | • In Figure 7-29, click set button, you can go to the corresponding setup interface.  
• Please set schedule period and then select corresponding record or snapshot type: schedule/snapshot, motion detection/snapshot, and alarm/snapshot.  
• Please select date (Current setup applies to current day by default. You can draw a circle before the week to apply the setup to the whole week.)  
• After complete setup, please go back to Figure 7-29 and then click save to save current time period setup. |
| Copy      | It is a shortcut menu button. You can copy current channel setup to one or more (all) channels. The interface is shown as in Figure 7-28. |
| Save      | You can click save button after you complete setup for one channel, or you can complete the whole setups and then click save button. |
| Refresh   | Click this button to get device latest configuration information. |

7.3.2.4 RS232
The RS232 interface is shown as in Figure 7-31.
Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>RS232</td>
<td>There are two options: COM 01 and keyboard.</td>
</tr>
<tr>
<td>Function</td>
<td>Console is to upgrade the program or debug via COM or mini terminal software. Keyboard: COM control protocol. You can use keyboard to control 10.2-inch combo DVR via COM.</td>
</tr>
<tr>
<td>Data Bit</td>
<td>The value ranges from 5 to 8.</td>
</tr>
<tr>
<td>Stop Bit</td>
<td>There are two options: 1/2.</td>
</tr>
<tr>
<td>Baud Bit</td>
<td>You can select corresponding baud bit here.</td>
</tr>
<tr>
<td>Parity</td>
<td>There are five options: none/odd/even/mark/space.</td>
</tr>
</tbody>
</table>

System default setup is:
- Function: Console.
- Data bit: 8
- Stop bit: 1
- Baud bit: 115200
- Parity: None.

7.3.2.5 Network
Network interface is shown as in Figure 7-32.
Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ethernet</td>
<td>Please select the network card first.</td>
</tr>
<tr>
<td>DHCP</td>
<td>Dynamically get IP address. You can get the device IP from the DHCP server if you enabled this function.</td>
</tr>
<tr>
<td>TCP Port</td>
<td>Default value is 37777.</td>
</tr>
<tr>
<td>HTTP Port</td>
<td>Default value is 80.</td>
</tr>
<tr>
<td>UDP Port</td>
<td>Default value is 37778.</td>
</tr>
<tr>
<td>Max Connection</td>
<td>Network user max amount. The value ranges from 0 to 20. O means there is no user can access current device.</td>
</tr>
</tbody>
</table>

**Email**

The email interface is shown as in Figure 7-33.
Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>SMTP Server</td>
<td>Input server address and then enable this function.</td>
</tr>
<tr>
<td>Port</td>
<td>Please input port value here.</td>
</tr>
<tr>
<td>User Name</td>
<td>The sender email account user name.</td>
</tr>
<tr>
<td>Password</td>
<td>The sender email account password.</td>
</tr>
<tr>
<td>Sender</td>
<td>Sender email address.</td>
</tr>
<tr>
<td>Subject</td>
<td>Input email subject here. Max 32-digit.</td>
</tr>
<tr>
<td>Address</td>
<td>Input receiver email address here. Max input three addresses.</td>
</tr>
</tbody>
</table>

**DDNS**

The DDNS interface is shown as in Figure 7-34.

Please make sure your 10.2-inch combo DVR supports this function.
Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Type</td>
<td>You can select DDNS protocol from the dropdown list and then enable DDNS function. The private DDNS protocol means you use your self-defined private protocol to realize DDNS function.</td>
</tr>
<tr>
<td>Server IP</td>
<td>DDNS server IP address</td>
</tr>
<tr>
<td>Server Port</td>
<td>DDNS server port</td>
</tr>
<tr>
<td>Domain Name</td>
<td>Your self-defined domain name.</td>
</tr>
<tr>
<td>User</td>
<td>The user name you input to log in the server.</td>
</tr>
<tr>
<td>Password</td>
<td>The password you input to log in the server.</td>
</tr>
<tr>
<td>Interval</td>
<td>• Device sends out alive signal to the server regularly.</td>
</tr>
<tr>
<td></td>
<td>• You can set interval value between the device and DDNS server here.</td>
</tr>
</tbody>
</table>

**NAS**

NAS interface is shown as in Figure 7-35.

Please make sure your 10.2-inch combo DVR supports this function.
Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>NAS enable</td>
<td>Please select network storage protocol and then enable NAS function.</td>
</tr>
<tr>
<td>Server IP</td>
<td>Input remote storage server IP address.</td>
</tr>
<tr>
<td>Port</td>
<td>Input Remote storage server port number.</td>
</tr>
<tr>
<td>User Name</td>
<td>Log in user account.</td>
</tr>
<tr>
<td>File length</td>
<td>The file length you upload to the FTP. When setup is larger than the actual file length, system will upload the whole file. When setup here is smaller than the actual file length, system only uploads the set length and auto ignore the left section. When interval value is 0, system uploads all corresponding files.</td>
</tr>
<tr>
<td>Password</td>
<td>The password you need to log in the server.</td>
</tr>
<tr>
<td>Remote Path</td>
<td>Remote storage file path.</td>
</tr>
<tr>
<td>Save</td>
<td>You can click save button after you complete setup for one channel, or you can complete the whole setups and then click save button.</td>
</tr>
<tr>
<td>Refresh</td>
<td>Click this button to get device latest configuration information.</td>
</tr>
</tbody>
</table>

**NTP**

The NTP interface is shown as in Figure 7-36. Here you can realize network time synchronization. Please enable current function and then input server IP, port number, time zone and update interval. Please note the SNTP supports TCP
transmission only and its port shall be 123. The update interval ranges from 1 to 65535. Default value is 10 minutes.

![Figure 7-36](image)

You can refer to the following sheet for time zone information.

<table>
<thead>
<tr>
<th>City /Region Name</th>
<th>Time Zone</th>
</tr>
</thead>
<tbody>
<tr>
<td>London</td>
<td>GMT+0</td>
</tr>
<tr>
<td>Berlin</td>
<td>GMT+1</td>

</tbody>
</table>

**Alarm Centre**

Alarm centre interface is shown as below. See Figure 7-37.
Advanced Interface is shown as in Figure 7-38.

- Multiple cast
  
  Please refer to chapter 5.3.5.3 for detailed multiple cast setup information.

- PPPoE
  
  Please input the PPPoE user name and password you get from the IPS (internet service provider) and enable PPPoE function. Please save current setup and then reboot the device to get the setup activated.

  Device connects to the internet via PPPoE after reboot. You can get the IP address in the WAN from the IP address column.

**Note:**

After PPPoE successful dial, you need to go to the device local end to get device current IP address and then use the client-end to access this IP address.
UNPN

Go to the UPnP interface, you can see an image is shown as in Figure 7-39. It allows you to establish the mapping relationship between the LAN and the public network. Here you can also add, modify or remove UPnP item.

Figure 7-38 UNPN

7.3.2.6 Alarm

Alarm setup interface is shown as in See Figure 7-40. Please make sure you have connected the corresponding alarm output device such as the light, buzzer and etc.
Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Event Type</td>
<td>It includes local alarm/network alarm. Local alarm: Device detects alarm from input port. Network: Device detects alarm from network.</td>
</tr>
<tr>
<td>Alarm In</td>
<td>Select corresponding alarm channel.</td>
</tr>
<tr>
<td>Enable</td>
<td>You need to draw a circle here so that system can detect the alarm signal.</td>
</tr>
<tr>
<td>Type</td>
<td>There are two options: normal open and normal close. NO becomes activated in low voltage, NC becomes activated in high voltage.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Function</td>
</tr>
<tr>
<td>-------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Period</td>
<td>Alarm record function becomes activated in the specified periods. There are six periods in one day. Please draw a circle to enable corresponding period. Select date. If you do not select, current setup applies to today only. You can select all week column to apply to the whole week. Click OK button, system goes back to alarm setup interface, please click save button to exit.</td>
</tr>
<tr>
<td>Anti-dither</td>
<td>System only memorizes one event during the anti-dither period. The value ranges from 3 to 600s.</td>
</tr>
<tr>
<td>Normal Out</td>
<td>Enable alarm activation function. You need to select alarm output port so that system can activate corresponding alarm device when alarm occurred.</td>
</tr>
<tr>
<td>Alarm Latch</td>
<td>System can delay the alarm output for specified time after alarm ended. The value ranges from 10 seconds to 300 seconds.</td>
</tr>
<tr>
<td>Show message</td>
<td>System pops up the alarm messages in the monitor interface.</td>
</tr>
<tr>
<td>Buzzer</td>
<td>Once you check the box here, the buzzer beeps when an alarm occurred.</td>
</tr>
<tr>
<td>Alarm upload</td>
<td>System can upload the alarm signal to the centre (Including alarm centre).</td>
</tr>
<tr>
<td>Record Channel</td>
<td>System auto activates current channel to record once alarm occurs (working with alarm activation function). Please note current device shall be in alarm record period (Chapter 7.3.2.3 Schedule) and you have enabled the schedule record function in chapter 7.3.3.3 Record.</td>
</tr>
<tr>
<td>Record Latch</td>
<td>System can delay the record for specified time after alarm ended. The value ranges from 10s to 300s.</td>
</tr>
<tr>
<td>Email</td>
<td>Please draw a circle to enable email function. System can send out email to alert you when alarm occurs and ends.</td>
</tr>
<tr>
<td>Tour</td>
<td>Display the selected video in local monitor window. Tour interval and tour mode are set in 10.2-inch combo DVR local menu (Chapter 5.3.9 Display)</td>
</tr>
<tr>
<td>PTZ activation</td>
<td>Here you can set PTZ movement when alarm occurs. Such as go to preset x when there is an alarm. The PTZ configuration events include preset, tour, and pattern.</td>
</tr>
<tr>
<td>Capture</td>
<td>You need to input capture channel number so that system can backup snapshot file when alarm occurs.</td>
</tr>
<tr>
<td>Copy</td>
<td>It is a shortcut menu button. You can copy current channel setup to one or more (all) channels.</td>
</tr>
<tr>

</tbody>
</table>

7.3.2.7 Detect
Analysis the video, system enable motion detection alarm when it detects the motion signal reached the specified sensitivity.

The detection interface is shown as in Figure 7-42.
Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Event Type</td>
<td>There are three types: Motion detection/video loss/Camera Masking.</td>
</tr>
<tr>
<td>Channel</td>
<td>Select channel name from the dropdown list.</td>
</tr>
<tr>
<td>Enable</td>
<td>You need to draw a circle to enable motion detection function.</td>
</tr>
<tr>
<td>Sensitivity</td>
<td>There are six levels. The sixth level has the highest sensitivity.</td>
</tr>
</tbody>
</table>
| Region | • There are six levels. The sixth level has the highest sensitivity.  
• Region: If you select motion detection type, you can click this button to set motion detection zone. The interface is shown as in Figure 7-43. There are PAL 22X18/NTSC 22X15 zones. Right click mouse you can go to full-screen display mode. Do remember clicking OK button to save your motion detection zone setup. |

Figure 7-42

Figure 7-43
<table>
<thead>
<tr>

<th>Function</th>
</tr>
</thead>
</table>
| Period       | • Motion detection function becomes activated in the specified periods.  
• There are six periods in one day. Please draw a circle to enable corresponding period.  
• Select date. If you do not select, current setup applies to today only. You can select all week column to apply to the whole week.  
• Click OK button, system goes back to motion detection interface; please click save button to exit. |
| Anti-dither  | System only memorizes one event during the anti-dither period. The value ranges from 3s to 600s.                                                                                                           |
| Normal out   | • There is 1-channel alarm output.  
• Corresponding to motion detection alarm output port(multiple choices)  
• Enable alarm activation function. You need to select alarm output port so that system can activate corresponding alarm device when alarm occurs. |
| Alarm latch  | System can delay the alarm output for specified time after alarm end. The value ranges from 10s to 300s.                                                                                                  |
| Show message | System pops up the alarm messages in the monitor interface.                                                                                                                                               |
| Buzzer       | Once you check the box here, the buzzer beeps when an alarm occurred.                                                                                                                                   |
| Alarm upload | System can upload the alarm signal to the centre (Including alarm centre).                                                                                                                                |
| Record channel | System auto activates motion detection channel (multiple choices) to record once alarm occurs (working with motion detection function). Please note current device shall be in alarm record period (Chapter 7.3.2.3 Schedule) and you have enabled the schedule record function in chapter 7.3.3.3 Record. |
| Record latch | System can delay the record for specified time after alarm ended. The value ranges from 10s to 300s.                                                                                                    |
| Email        | If you enabled this function, System can send out email to alert you when alarm occurs and ends.                                                                                                         |
| Tour         | • Display the selected video in local monitor window.  
• Tour interval and tour mode are set in 10.2-inch combo DVR local menu (chapter 5.3.9 Display )                                                                                                         |
| PTZ Activation | • Here you can set PTZ movement when alarm occurs. Such as go to preset x when there is an alarm.                                                                                                         |
| Capture      | You need to input capture channel number so that system can backup motion detection snapshot file.                                                                                                        |
| Matrix Enable | Please note this function is valid in motion detect mode. Check the box here to enable video matrix function. Right now system supports one-channel tour function. System takes “first come and first serve” principle to deal with the activated tour. System will process the new tour when a new alarm occurs after previous alarm ended. Otherwise it restores the previous output status before the alarm activation. |
### 7.3.2.8 PTZ

PTZ interface is shown as in Figure 7-44.

Please note, before operation please make sure you have set speed dome address. And 10.2-inch combo DVR and speed dome connection is OK.

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Channel</td>
<td>You can select monitor channel from the dropdown list.</td>
</tr>
<tr>
<td>Protocol</td>
<td>Select the corresponding dome protocol. (such as PELCOD)</td>
</tr>
<tr>
<td>Address</td>
<td>Set corresponding dome address. Default value is 1. Please note your setup here shall comply with your dome address; otherwise you cannot control the speed dome.</td>
</tr>
<tr>
<td>Baud Rate</td>
<td>Select the dome baud rate. Default setup is 9600.</td>
</tr>
<tr>
<td>Data Bit</td>
<td>Default setup is 8. Please set according to the speed dome dial switch setup.</td>
</tr>
<tr>
<td>Stop bit</td>
<td>Default setup is 1. Please set according to the speed dome dial switch setup.</td>
</tr>
</tbody>
</table>
Parameter | Function
Parity | Default setup is none. Please set according to the speed dome dial switch setup.
Save | You can click save button after you complete setup for one channel, or you can complete the whole setups and then click save button.
Refresh | Click this button to get device latest configuration information.

7.3.2.9 Default & Backup
Default: Restore factory default setup. You can select corresponding items.
Backup: Export current configuration to local PC or import configuration from current PC.
Please refer to Figure 7-45.
Please note system can not restore some information such as network IP address.

Figure 7-45

Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select All</td>
<td>Restore factory default setup.</td>

<td>Import configuration from PC to the system.</td>
</tr>
</tbody>
</table>

7.3.3 Advanced
7.3.3.1 HDD Management
HDD management includes net storage management and local storage management.
Please note, if you want to use local storage function, your storage device need to support current function. Please select the storage device first and then you can see the items on your right become valid. You can check the corresponding item here. See Figure 7-46.

![Configuration](image)

**Figure 7-46**

Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>

</thead>
<tbody>
<tr>
<td>Format</td>
<td>Clear data in the disk.</td>
</tr>
<tr>
<td>Read/write</td>
<td>Set current SD card as read/write</td>
</tr>
<tr>
<td>Read only</td>
<td>Set current card as read.</td>
</tr>
<tr>
<td>Recover</td>
<td>Recover data after error occurs.</td>
</tr>
</tbody>
</table>

Please note system needs to reboot to activate current setup.

7.3.3.2 Alarm I/O

Here you can search alarm output status. See Figure 7-47.
Important

The alarm output port should not be connected to high power load directly (It shall be less than 1A) to avoid high current which may result in relay damage. Please use the co contactor to realize the connection between the alarm output port and the load. Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alarm output</td>
<td>There is one channel.</td>
</tr>
<tr>
<td>Activate</td>
<td>Enable/disable alarm output device. After the Web activated the alarm, you need to cancel the channel and then click the <strong>trigger</strong> button to cancel the alarm, or you need to cancel the alarm in the pop-up dialogue box in local-end.</td>
</tr>
<tr>
<td>Refresh</td>
<td>Search alarm output status.</td>
</tr>
</tbody>
</table>

7.3.3.3 Record

Record control interface is shown as in Figure 7-48.
Figure 7-48

Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Schedule</td>
<td>System enables auto record function as you set in record schedule setup.</td>
</tr>
<tr>
<td>Manual</td>
<td>Enable corresponding channel to record no matter what period applied in the record setup.</td>
</tr>
<tr>
<td>Stop</td>
<td>Stop current channel record no matter what period applied in the record setup.</td>
</tr>
</tbody>
</table>

Operation here is the same to chapter 4.2 Manual Record. Please refer to chapter 4.2 for detailed information.

7.3.3.4 Account
Here you can add, remove user or modify password. See Figure 7-49.

Figure 7-49

7.3.3.5 Auto Maintenance
Here you can select auto reboot and auto delete old files interval from the dropdown list. See Figure 7-50.
7.3.3.6 Snapshot
Snapshot interface is shown as in Figure 7-51.

Please refer to the following sheet for detailed information.
Parameter | Function
--- | ---
Channel | It is the monitor channel.
Snapshot mode | There are two modes: Timing and activation.
Frame rate | You can select from the dropdown list. The value ranges from 1fps to 7fps.
Resolution | The channel 1 supports D1/CIF/QCIF. The channel 2 to channel 8 supports CIF/QCIF.
Quality | You can select from the dropdown list. Here is for you to set video quality. There are six options: 10%, 30%, 50%, 60%, 80%, 100%. The 100% is the best quality for this series product.

7.3.3.7 Abnormity

The abnormity interface is shown as below. See Figure 7-52.

![Figure 7-52](image)

Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Event Type</td>
<td>• The abnormal events include: no disk, no space, disk error, net error. • You need to draw a circle to enable this function. (Multiple choices)</td>
</tr>
<tr>
<td>Normal Out</td>
<td>The corresponding alarm activation output channel when alarm occurs. There is one channel.</td>
</tr>
<tr>
<td>Latch</td>
<td>The alarm output can delay for the specified time after alarm stops. Then system disables alarm and corresponding activation output. The value ranges from 1s to 300s.</td>
</tr>
<tr>
<td>Send email</td>
<td>If you enable this function, system can send out email to alarm the specified user.</td>
</tr>
<tr>
<td>Alarm upload</td>
<td>System can upload the alarm signal to the network (including the alarm centre.)</td>
</tr>
<tr>
<td>Show message</td>
<td>System can display alarm information in local 10.2-inch combo DVR screen.</td>
</tr>
</tbody>
</table>
7.3.4 Additional Function

7.3.4.1 DNS

Here you can set server or local operator DNS address. See Figure 7-53.

![Configuration](image)

**Figure 7-53**

7.3.4.2 Card Overlay

Tit is the same with the card overlay function (chapter 5.5.9). It is mainly for financial areas to Sniffer, information parse and character overlay. The ATM/POS interface is shown as in Figure 7-54.

Source IP refers to host IP address that sends out information (usually it is the device host connected to the DVR.)

Destination IP refers to other systems that receive information.

There are total four groups IP. The record channel applies to one group (optional) only.

Six frame ID groups verification can guarantee information validity and legal.

The start position, length and data can be set according to your protocol and data packet. There are total four fields.
7.3.4.3 Auto Register
Auto register interface is shown as below. See Figure 7-55.

![Figure 7-55 Auto Register](image)

Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable</td>
<td>Enable auto register function.</td>
</tr>
<tr>
<td>No.</td>
<td>Device management server number.</td>
</tr>
<tr>
<td>IP</td>
<td>Device management server IP address.</td>
</tr>
</tbody>
</table>
Port | Server port number.
---|---
Device ID | Device ID in the device management server.

### 7.4 Search

Click search button, you can see an interface is shown as in Figure 7-56. Please select record playback mode, and then select start time, end time and channel. Then please click search button, you can see the corresponding files in the list.

![Figure 7-56](image_url)

Select the file(s) you want to download and then click download button, system pops up a dialogue box shown as in Figure 7-57, and then you can specify file name and path to download the file(s) to your local pc.

![Figure 7-57](image_url)
Now you can see system begins download and the download button becomes stop button. You can click it to terminate current operation.

At the bottom of the interface, there is a process bar for your reference. See Figure 7-58.

![Figure 7-58](image)

When download completed, you can see a dialogue box shown as in Figure 7-59. Please click OK to exit.

![Figure 7-59](image)

Please refer to the following sheet for detailed information.

<table>
<thead>
<tr>
<th>Type</th>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type</td>
<td>Record</td>
<td>Search general record, alarm record and motion detection record.</td>
</tr>
<tr>

</tbody>
</table>

<table>
<thead>
<tr>
<th>Item</th>
<th>Operation</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Begin time</td>
<td>Search</td>
<td>Click this button you can view the recorded file matched your requirements. There are 100 files in one screen. You can use pg up/down button to view more files.</td>
</tr>
<tr>
<td>End time</td>
<td>Playback</td>
<td>Select the file first and then click playback button to view the video.</td>
</tr>
<tr>
<td>Channel</td>
<td>Download type</td>
<td>Download by file: Select the file(s) and then click download button.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Download by time: Download the recorded file(s) within your specified period.</td>
</tr>
<tr>
<td></td>
<td>Download</td>
<td>Select the file you need (multiple choices) and then click download button, you can see system pops up a dialogue box. See Figure 7-57. Input the downloaded file name, specify the path and then click OK button. You can see system begins download and the download becomes stop button. There is a progress bar for your reference.</td>
</tr>
<tr>
<td></td>
<td>Open local record</td>
<td>Select local record to play.</td>
</tr>
</tbody>
</table>

During the playback process, you can see there are control buttons such as play, pause, stop, slow play and fast play in the play process bar. You can view current playback file channel name, time and data statistics.

In the search result interface, you can select one or more files to download to your local PC. The playback control bar is shown as below. See Figure 7-60.

1: Play
2: Pause
3: Stop
4: Slow play
5: Fast play
7.5 Alarm

Click alarm function, you can see an interface is shown as in Figure 7-61. Here you can set device alarm type and alarm sound setup.

Please refer to the following sheet for detailed information.
Please make sure current device can upload the alarm.

<table>
<thead>
<tr>
<th>Type</th>

<td>Here you can specify alarm sound file.</td>
</tr>
</tbody>
</table>

7.6 About

Click about button, you can view current web client information. See Figure 7-62.

![Figure 7-62](image)

7.7 Log out

Click log out button, system goes back to log in interface. See Figure 7-63.
You need to input user name and password to login again.
7.8 Un-install Web Control

You can use web un-install tool “uninstall web.bat” to un-install web control.

Please note, before you un-installation, please close all web pages, otherwise the un-installation might result in error.
8 Professional Surveillance System

Besides Web, you can use our Professional Surveillance Software (PSS) to login the device. For detailed information, please refer to PSS user's manual.
9 FAQ

1. 10.2-inch combo DVR can not boot up properly.
   There are following possibilities:
   - Input power is not correct.
   - Power connection is not correct.
   - Power switch button is damaged.
   - Program upgrade is wrong.
   - HDD malfunction.
   - Main board is damaged.

2. The LCD does not work after device booted up.
   There are following possibilities:
   - The screen is damaged during the transportation resulting from the heavy vibration.
   - The LCD connection is loose. Please contact your local retailer for help.
   - Upgrade program is not correct. Please select the corresponding program to upgrade again.

3. 10.2-inch combo DVR often automatically shuts down or stops running.
   There are following possibilities:
   - Input voltage is not stable or it is too low.
   - HDD malfunction or something wrong with the ribbon.
   - Device power is not enough.
   - Front video signal is not stable.
   - Working environment is too harsh, too much dust.
   - Hardware malfunction.

4. System can not detect hard disk.
   There are following possibilities:
   - HDD cable connection is loose.
   - Main board SATA port is broken.

5. There is no video output whether it is one-channel, multiple-channel or all-channel output.
   There are following possibilities:
   - Program is not compatible. Please upgrade to the latest version.
   - Brightness is 0. Please restore factory default setup.
   - There is no video input signal or it is too weak.
   - Check privacy mask setup or your screen saver.
   - 10.2-inch combo DVR hardware malfunctions.

6. Real-time video color is distorted.
   There are following possibilities:
   - When using BNC output, NTSC and PAL setup is not correct. The real-time video becomes black and white.
- 10.2-inch combo DVR and monitor resistance is not compatible.
- Video transmission is too long or degrading is too huge.
- 10.2-inch combo DVR color or brightness setup is not correct.

7. Can not search local records.
There are following possibilities:
- HDD is broken.
- Upgraded program is not compatible.
- The recorded file has been overwritten.
- Record function has been disabled.

8. Video is distorted when searching local records.
There are following possibilities:
- Video quality setup is too low.
- Program read error, bit data is too small. There is mosaic in the full screen. Please restart the 10.2-inch combo DVR to solve this problem.
- HDD malfunction.
- 10.2-inch combo DVR hardware malfunctions.

9. There is no audio when monitor.
There are following possibilities:
- It is not an active picker.
- It is not an active acoustics.
- Audio cable is damaged.
- 10.2-inch combo DVR hardware malfunctions.

10. There is audio when monitor but there is no audio when system playback.
There are following possibilities:
- Setup is not correct. Please enable audio function
- Corresponding channel has no video input. Playback is not continuous when the screen is blue.

11. Time display is not correct.
There are following possibilities:
- Setup is not correct
- Battery contact is not correct or voltage is too low.
- Crystal is broken.

12. 10.2-inch combo DVR can not control PTZ.
There are following possibilities:
- Front panel PTZ error
- PTZ decoder setup, connection or installation is not correct.
- Cable connection is not correct.
- PTZ setup is not correct.
- PTZ decoder and 10.2-inch combo DVR protocol is not compatible.
● PTZ decoder and 10.2-inch combo DVR address is not compatible.
● When there are several decoders, please add 120 Ohm between the PTZ decoder A/B cables furthest end to delete the reverberation or impedance matching. Otherwise the PTZ control is not stable.
● The distance is too far.

13. Motion detection function does not work.
There are following possibilities:
● Period setup is not correct.
● Motion detection zone setup is not correct.
● Sensitivity is too low.
● For some versions, there is hardware limit.

14. Can not log in client-end or web.
There are following possibilities:
● For Windows 98 or Windows ME user, please update your system to Windows 2000 sp4. Or you can install client-end software of lower version. Please note right now, our 10.2-inch combo DVR is not compatible with Windows VISTA control.
● ActiveX control has been disabled.
● No dx8.1 or higher. Please upgrade display card driver.
● Network connection error.
● Network setup error.
● Password or user name is invalid.
● Client-end is not compatible with 10.2-inch combo DVR program.

15. There is only mosaic no video when preview or playback video file remotely.
There are following possibilities:
● Network fluency is not good.
● Client-end resources are limit.
● There is multiple-cast group setup in 10.2-inch combo DVR. This mode can result in mosaic. Usually we do not recommend this mode.
● There is privacy mask or channel protection setup.
● Current user has no right to monitor.
● 10.2-inch combo DVR local video output quality is not good.

16. Network connection is not stable.
There are following possibilities:
● Network is not stable.
● IP address conflict.
● MAC address conflict.
● PC or 10.2-inch combo DVR network card is not good.
● Cable and the CVR socket connection is not good. Please secure the screw.

17. Burn error /USB back error.
There are following possibilities:
• Burner and 10.2-inch combo DVR are in the same data cable.
• System uses too much CPU resources. Please stop record first and then begin backup.
• Data amount exceeds backup device capacity. It may result in burner error.
• Backup device is not compatible.
• Backup device is damaged.

18. Keyboard can not control 10.2-inch combo DVR.
There are following possibilities:
• 10.2-inch combo DVR serial port setup is not correct
• Address is not correct
• When there are several switchers, power supply is not enough.
• Transmission distance is too long.

19. Alarm signal can not been disarmed.
There are following possibilities:
• Alarm setup is not correct.
• Alarm output has been open manually.
• Input device error or connection is not correct.
• Some program versions may have this problem. Please upgrade your system.

20. Alarm function is null.
There are following possibilities:
• Alarm setup is not correct.
• Alarm cable connection is not correct.
• Alarm input signal is not correct.
• There are two loops connect to one alarm device.

21. Remote control does not work.
There are following possibilities:
• Remote control address is not correct.
• Distance is too far or control angle is too small.
• Remote control battery power is low.
• Remote control is damaged or 10.2-inch combo DVR front panel is damaged.

22. Record storage period is not enough.
There are following possibilities:
• Camera quality is too low. Lens is dirty. Camera is installed against the light. Camera aperture setup is not correct.
• HDD capacity is not enough.
• HDD is damaged.

23. Can not playback the downloaded file.
There are following possibilities:
• There is no media player.
• No DXB8.1 or higher graphic acceleration software.
- There is no DivX503Bundle.exe control when you play the file transformed to AVI via media player.
- No DivX503Bundle.exe or ffdshow-2004 1012 .exe in Windows XP OS.

24. **Forgot local menu operation password or network password**
Please contact your local service engineer or our sales person for help. We can guide you to solve this problem.

25. **I can not use the touch panel**
Please use the touch panel calibration function (chapter 5.3.9).

**Daily Maintenance**

- Please use the brush to clean the board, socket connector and the chassis regularly.
- The device shall be soundly earthed in case there is audio/video disturbance. Keep the device away from the static voltage or induced voltage.
- Please unplug the power cable before you remove the audio/video signal cable, RS232 or RS485 cable.
- Do not connect the TV to the local video output port (VOUT). It may result in video output circuit.
- Always shut down the device properly. Please use the shutdown function in the menu, or you can press the power button in the front pane for at least three seconds to shut down the device. Otherwise it may result in HDD malfunction.
- Please make sure the device is away from the direct sunlight or other heating sources. Please keep the sound ventilation.
- Please check and maintain the device regularly.
Appendix A HDD Capacity Calculation

Calculate total capacity needed by each DVR according to video recording (video recording type and video file storage time).

Step 1: According to Formula (1) to calculate storage capacity $q_i$ that is the capacity of each channel needed for each hour, unit Mbyte.

$$q_i = \frac{d_i \times 8 \times 3600}{1024}$$  \hspace{1cm} (1)

In the formula: $d_i$ means the bit rate, unit Kbit/s

Step 2: After video time requirement is confirmed, according to Formula (2) to calculate the storage capacity $m_i$, which is storage of each channel needed unit Mbyte.

$$m_i = q_i \times h_i \times D_i$$  \hspace{1cm} (2)

In the formula:

$h_i$ means the recording time for each day (hour)

$D_i$ means number of days for which the video shall be kept

Step 3: According to Formula (3) to calculate total capacity (accumulation) $q_T$ that is needed for all channels in the DVR during scheduled video recording.

$$q_T = \sum_{i=1}^{c} m_i$$  \hspace{1cm} (3)

In the formula: $c$ means total number of channels in one DVR

Step 4: According to Formula (4) to calculate total capacity (accumulation) $q_T$ that is needed for all channels in DVR during alarm video recording (including motion detection).

$$q_T = \sum_{i=1}^{c} m_i \times a\%$$  \hspace{1cm} (4)

In the formula: $a\%$ means alarm occurrence rate

You can refer to the following sheet for the one-hour file size from one channel.

Please note the following sheet is for reference only.

Appendix G Earthing

1. What is the surge?
Surge is a short current or voltage change during a very short time. In the circuit, it lasts for microsecond. In a 220V circuit, the 5KV or 10KV voltage change during a very short time (about microseconds) can be called a surge. The surge comes from two ways: external surge and internal surge.

- The external surge: The external surge mainly comes from the thunder lightning. Or it comes from the voltage change during the on/off operation in the electric power cable.
- The internal surge: The research finds 88% of the surge from the low voltage comes from the internal of the building such as the air conditioning, elevator, electric welding, air compressor, water pump, power button, duplicating machine and other device of inductive load.

The lightning surge is far above the load level the PC or the micro devices can support. In most cases, the surge can result in electric device chip damage, PC error code, accelerating the part aging, data loss and etc. Even when a small 20 horsepower inductive engine boots up or stops, the surge can reach 3000V to 50000V, which can adversely affect the electronic devices that use the same distribution box.

To protect the device, you need to evaluate its environment, the lighting affection degree objectively. Because surge has close relationship with the voltage amplitude, frequency, network structure, device voltage-resistance, protection level, ground and etc. The thunder proof work shall be a systematic project, emphasizing the all-round protection (including building, transmission cable, device, ground and etc.). There shall be comprehensive management and the measures shall be scientific, reliable, practical and economic. Considering the high voltage during the inductive thundering, the International Electrotechnical Committee (IEC) standard on the energy absorbing step by step theory and magnitude classification in the protection zone, you need to prepare multiple precaution levels.

You can use the lightning rod, lightning strap or the lightning net to reduce the damage to the building, personal injury or the property.

- The lightning protection device can be divided into three types:
  - Power lightning arrester: There are 220V single-phrase lightning arrester and 380V three-phase lightning arrester (mainly in parallel connection, sometimes use series connection ) You can parallel connect the power lightning arrester in the electric cable to reduce the short-time voltage change and release the surge current. From the BUS to the device, there are usually three levels so that system can reduce the voltage and release the current step by step to remove the thunderstorm energy and guarantee the device safety. You can select the replaceable module type, the terminal connection type and portable socket according to your requirement.
  - Signal lightning arrester: This device is mainly used in the PC network, communication system. The connection type is serial connection. Once you connected the signal lightning arrester with the signal port, it can cut the channel of the thunderstorm to the device, and on the other hand, it can discharge the current to the ground to guarantee the device proper
work. The signal lightning arrester has many specifications, and widely used in many devices such as telephone, network, analog communication, digital communication, cable TV and satellite antenna. For all the input port, especially those from the outdoor, you need to install the signal lightning arrester.

- Antenna feed cable lightning arrester: It is suitable for antenna system of the transmitter or the device system to receive the wireless signal. It uses the serial connection too.

Please note, when you select the lighting arrester, please pay attention to the port type and the earthing reliability. In some important environment, you need to use special shielded cable. Do not parallel connect the thunder proof ground cable with the ground cable of the lightning rod. Please make sure they are far enough and grounded respectively.

2. The earthing modes

We all know the earthing is the most complicated technology in the electromagnetism compatibility design since there is no systematic theory or module. The earthing has many modes, but the selection depends on the system structure and performance. The following are some successfully experience from our past work.

**One-point ground:** In the following figure you can see there is a one-point ground. This connection provides common port to allow signal to be transmitted in many circuits. If there is no common port, the error signal transmission occurred. In the one-point ground mode, each circuit is just grounded only and they are connected at the same port. Since there is only one common port, there is no circuit and so, there is no interference.

![One-point ground diagram](image)

**Multiple-point ground:** In the following figure, you can see the internal circuit uses the chassis as the common point. While at the same time, all devices chassis use the earthing as the common port. In this connection, the ground structure can provide the lower ground resistance because when there are multiple-point grounds; each ground cable is as short as possible. And the parallel cable connection can reduce the total conductance of the ground conductor. In the high-frequency circuit, you need to use the multiple-point ground mode and each cable needs to connect to the ground. The length shall be less than the 1/20 of the signal wavelength.
**Mixed ground:** The mix ground consists of the feature of the one-point ground and multiple-point ground. For example, the power in the system needs to use the one-point ground mode while the radio frequency signal requires the multiple-point ground. So, you can use the following figure to earth. For the direct current (DC), the capacitance is open circuit and the circuit is one-point ground. For the radio frequency signal, the capacitance is conducive and the circuit adopts multiple-point ground.

When connecting devices of huge size (the device physical dimension and connection cable is big comparing with the wave path of existed interference), then there are possibility of interference when the current goes through the chassis and cable. In this situation, the interference circuit path usually lies in the system ground circuit.

When considering the earthing, you need to think about two aspects: The first is the system compatibility, and the other is the external interference coupling into the earth circuit, which results in system error. For the external interference is not regular, it is not easy to resolve.

### 3. Thunder proof ground method in the monitor system
- The monitor system shall have sound thunder proof earthing to guarantee personnel safety and device safety.
- The monitor system working ground resistance shall be less than 1Ω.
- The thunder proof ground shall adopt the special ground cable from the monitor control room to the ground object. The ground cable adopts copper insulation cable or wire and its ground section shall be more than 20mm².
- The ground cable of the monitor system can not short circuit or mixed connected with the strong alternative current cable.
- For all the ground cables from the control room to the monitor system or ground cable of other monitor devices, please use the copper resistance soft cable and its section shall be more than 4mm².
The monitor system usually can adopt the one-point ground. Please connect the ground end of 3-pin socket in the monitor system to the ground port of the system (protection ground cable).

4. The shortcut way to check the electric system using the digital multimeter
For 220V AC socket, from the top to the bottom, E (ground cable), N (neutral cable), L (live cable). Please refer to the following figure.

There is a shortcut way to check these thee cables connection are standard or not (not the accurate check).

**Importance**
In the following operations, the multimeter range shall be at 750V!

**For E (earth cable)**
Turn the digital multimeter to 750V AC, use your one hand to hold the metal end, and then the other hand insert the pen to the E port of the socket. See the following figure. If the multimeter shows 0, then you can see current earth cable connection is standard. If the value is more than 10, then you can see there is inductive current and the earth cable connection is not proper.
For L (live cable)
Turn the digital multimeter to 750V AC, use your one hand to hold the metal end, and then the other hand insert the pen to the L port of the socket. See the following figure. If the multimeter shows 120, then you can see current live cable connection is standard. If the value is less than 60, then you can see current live cable connection is not proper or it is not the live cable at all.

For N (Neutral cable)
Turn the digital multimeter to 750V AC, use your one hand to hold the metal end, and then the other hand insert the pen to the N port of the socket. See the following figure. If the multimeter shows 0, then you can see current N cable connection is standard. If the value is more than 10, then you can see there is inductive current and the neutral cable connection is not proper. If the value is 120, then you can know misconnected the neutral cable to the live cable.
